

# Investigating fireline geometry processes and fuel pattern impacts with prescribed fire experiments and CFD modeling

International Workshop: New Remote Sensing Techniques for 3D Forest Structure Mapping  
and Wildfire Modeling  
May 21-22, 2024

Chris Moran, Carl Seielstad, Anthony Marcozzi, Marta Jerebets, Anna Vonessen, Mary Brady, Valentijn Hoff, Lloyd Queen, Russ Parsons, Sarah Flanary, etc.!!!

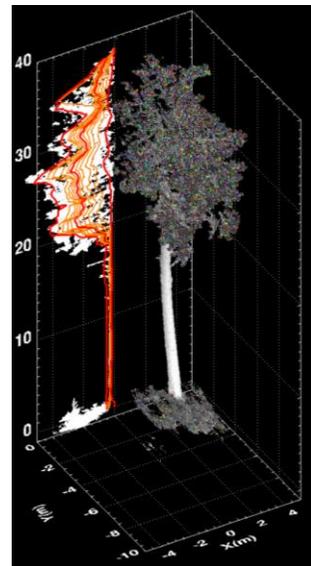

# National Center for Landscape Fire Analysis

22+ Years of

Fire Science

- Remote Sensing
- Geospatial
- Fuel Characterization
- Fire Modeling

Workforce Training

- Fire and Land Managers
- Prescribed Fire
- Graduate Degrees
  - MS and PhD
- Undergraduate
  - Fire Science Minor

Science and Technology Transfer

- Incident Management Teams
- Wildfire Assignments
- Prescribed Fire
- Tool and Database Development

# Outline

---

- Survey of 3D Data and Fuels
- Survey of Fire Behavior Data Collected
- Specifically Address Three Burn Experiments
- Fire Modeling Early Results and Directions

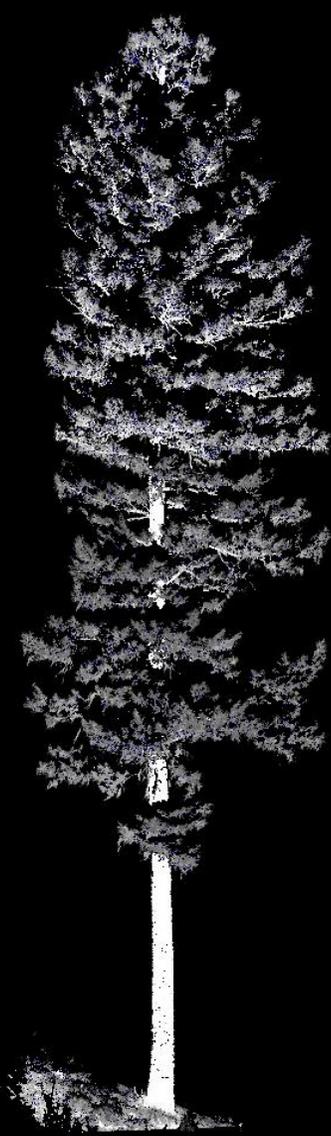

# Fire Science

- Remote Sensing
  - LiDAR
    - ALS, TLS, Drone
  - Thermal
    - Drone, Ground-Based
  - Multispectral
    - Satellite, Drone
  - Hyperspectral
    - Drone

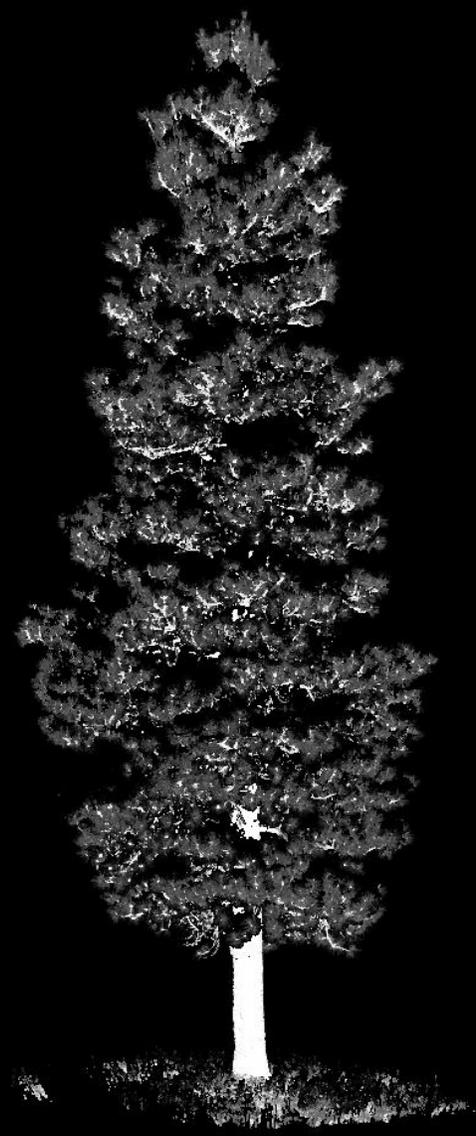

Subalpine Fir

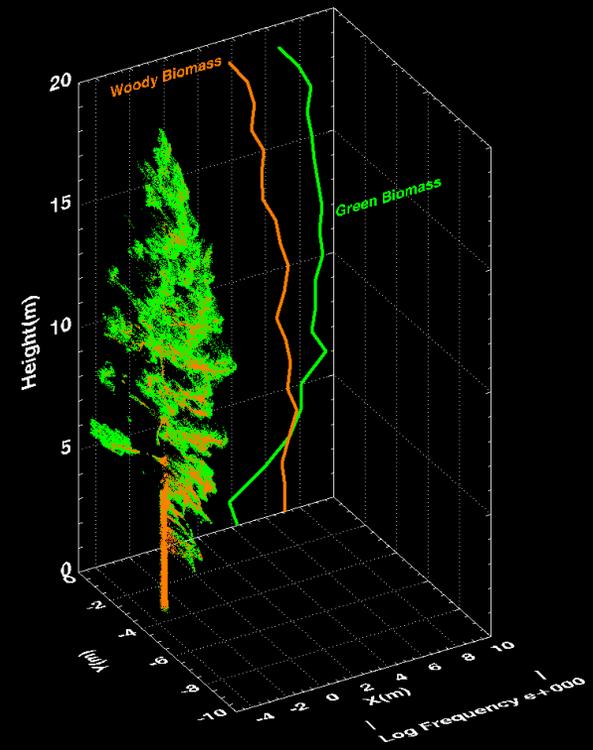

Douglas Fir

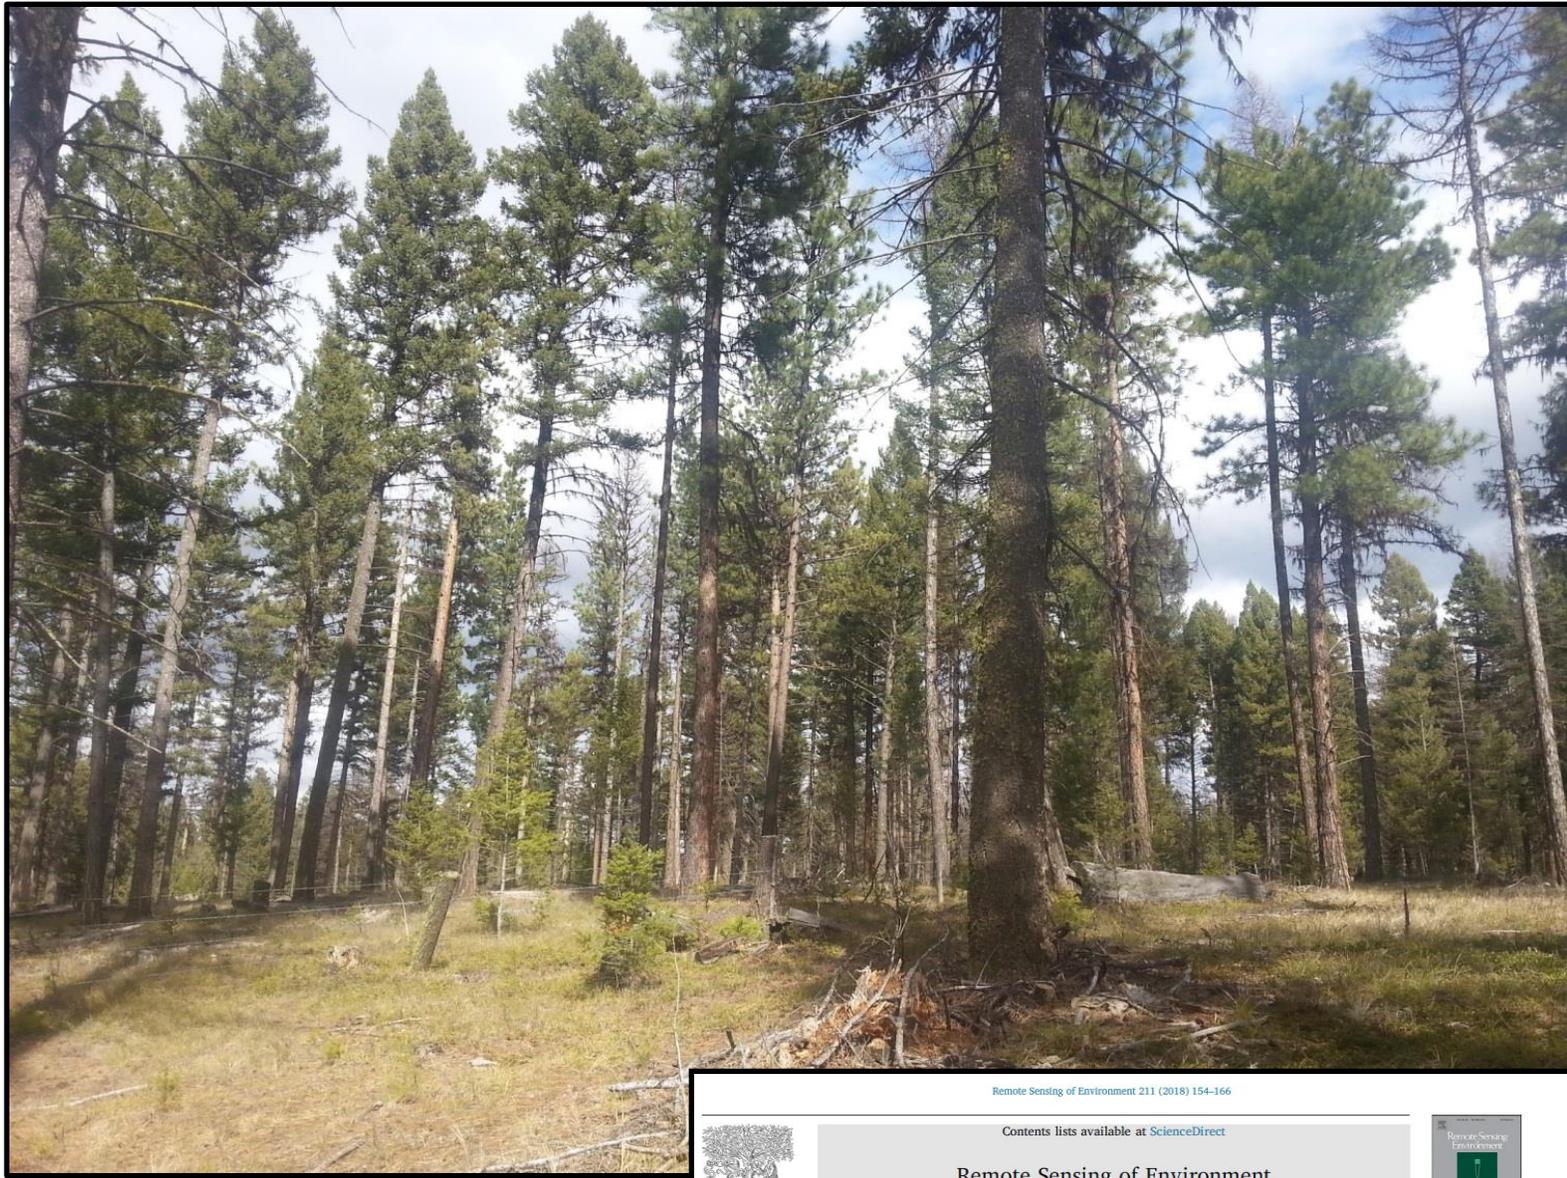

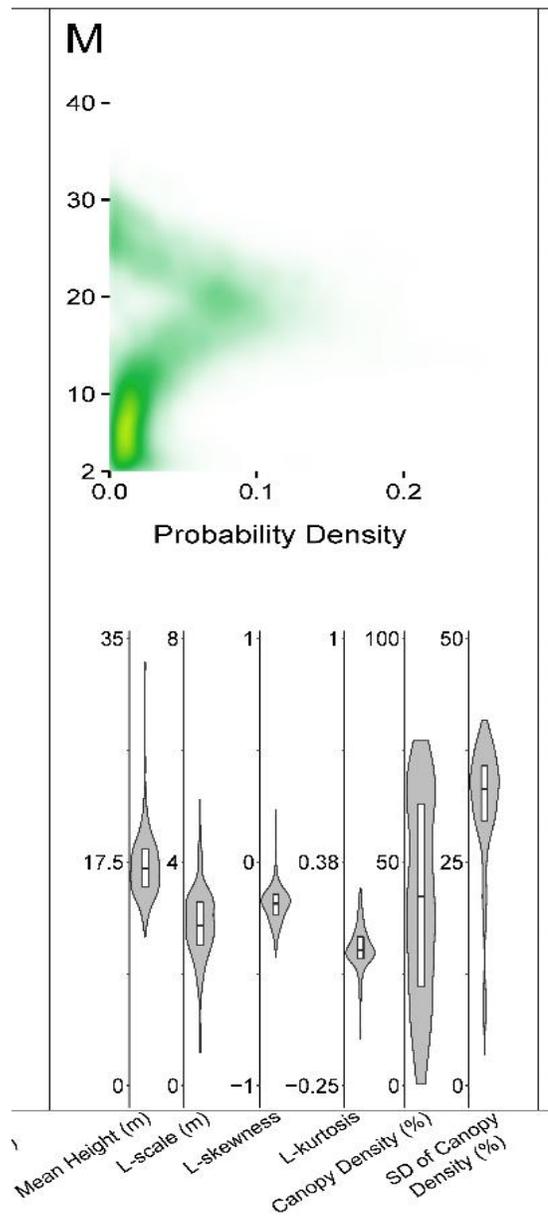

Grand Fir

Ponderosa Pine

ELSEVIER

Check for updates

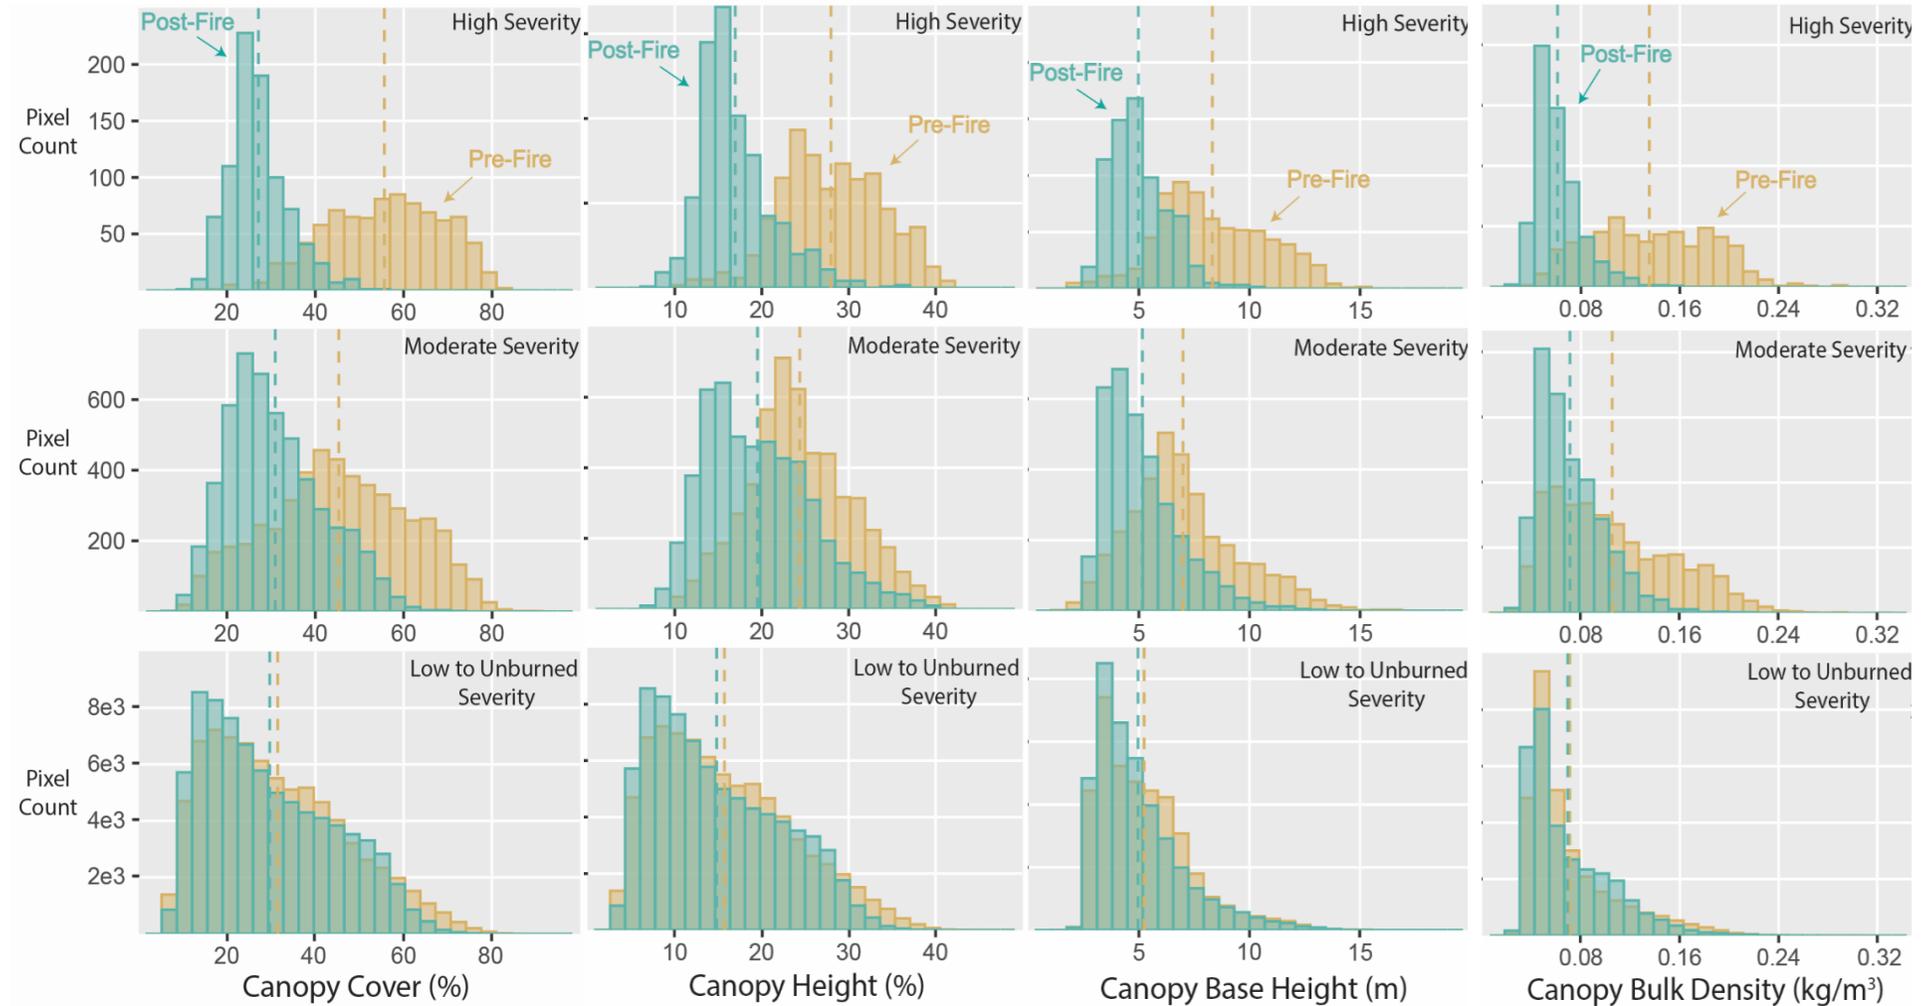

A data-driven framework to identify and compare forest structure classes using LiDAR

Christopher J. Moran\*, Eric M. Rowell, Carl A. Seielstad

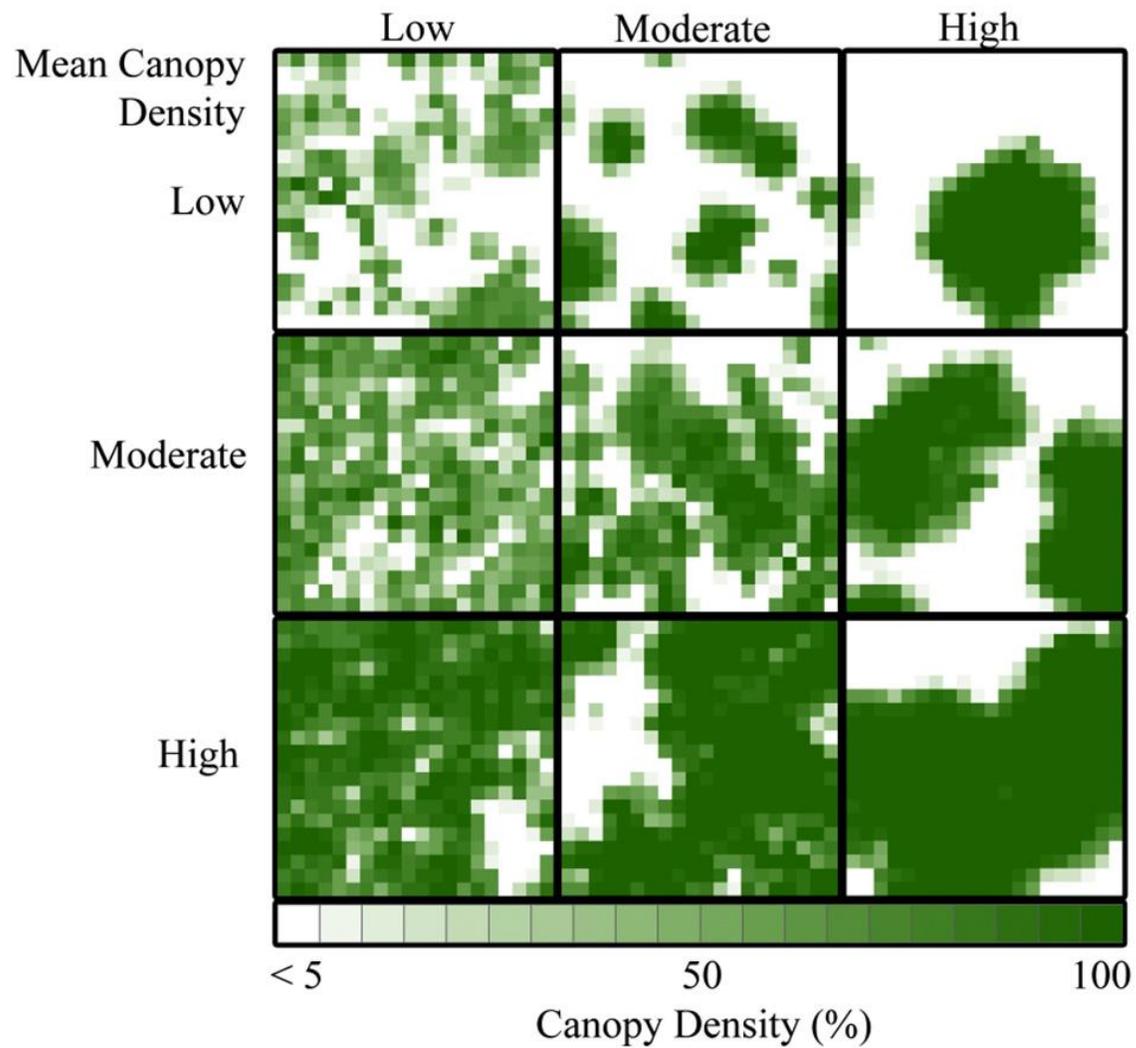

National Center for Landscape Fire Analysis, University of Montana, Missoula, MT, United States

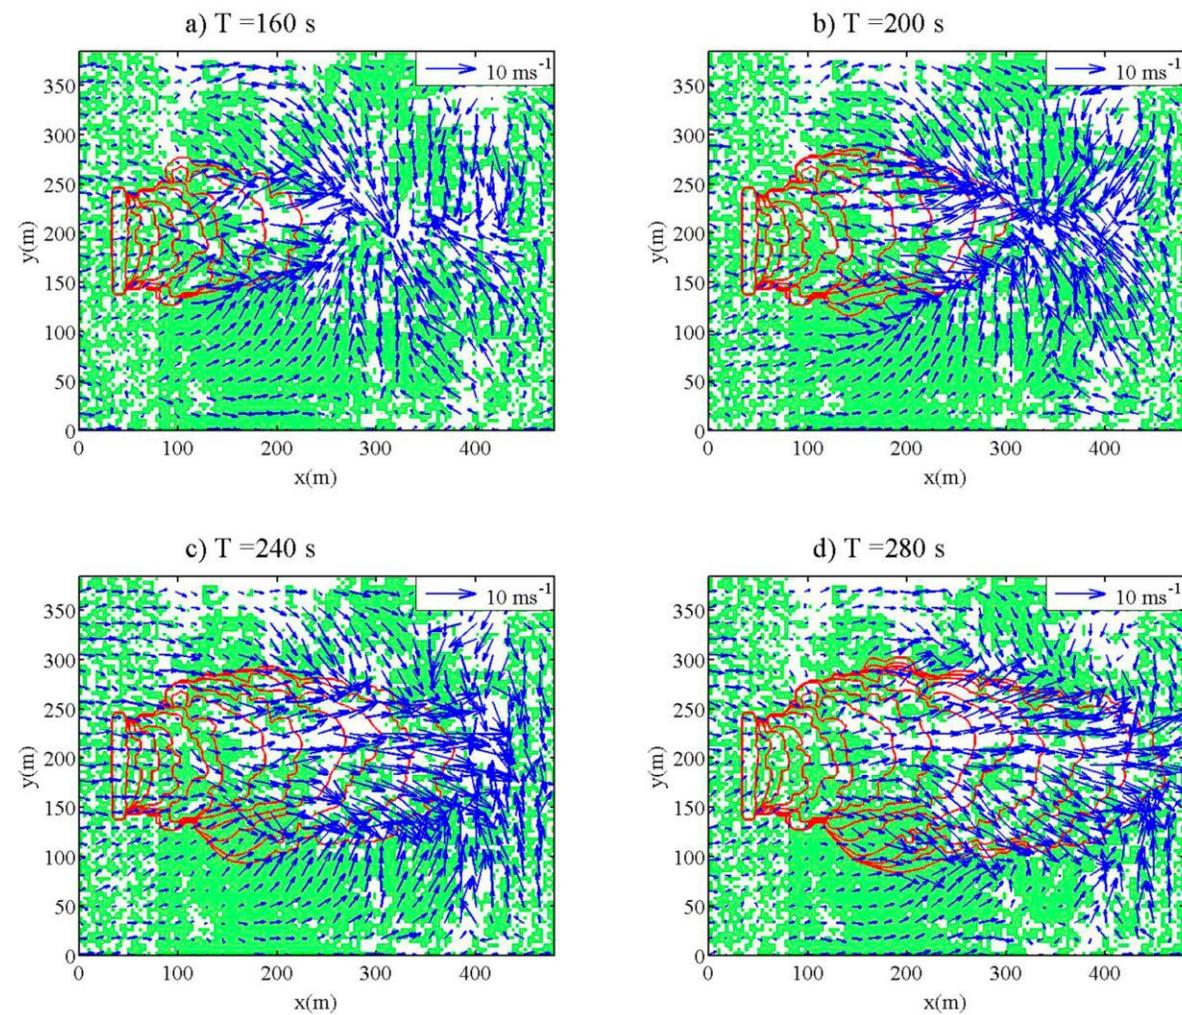

# Model Response to Fire

# Horizontal Standard Deviation of Canopy Density

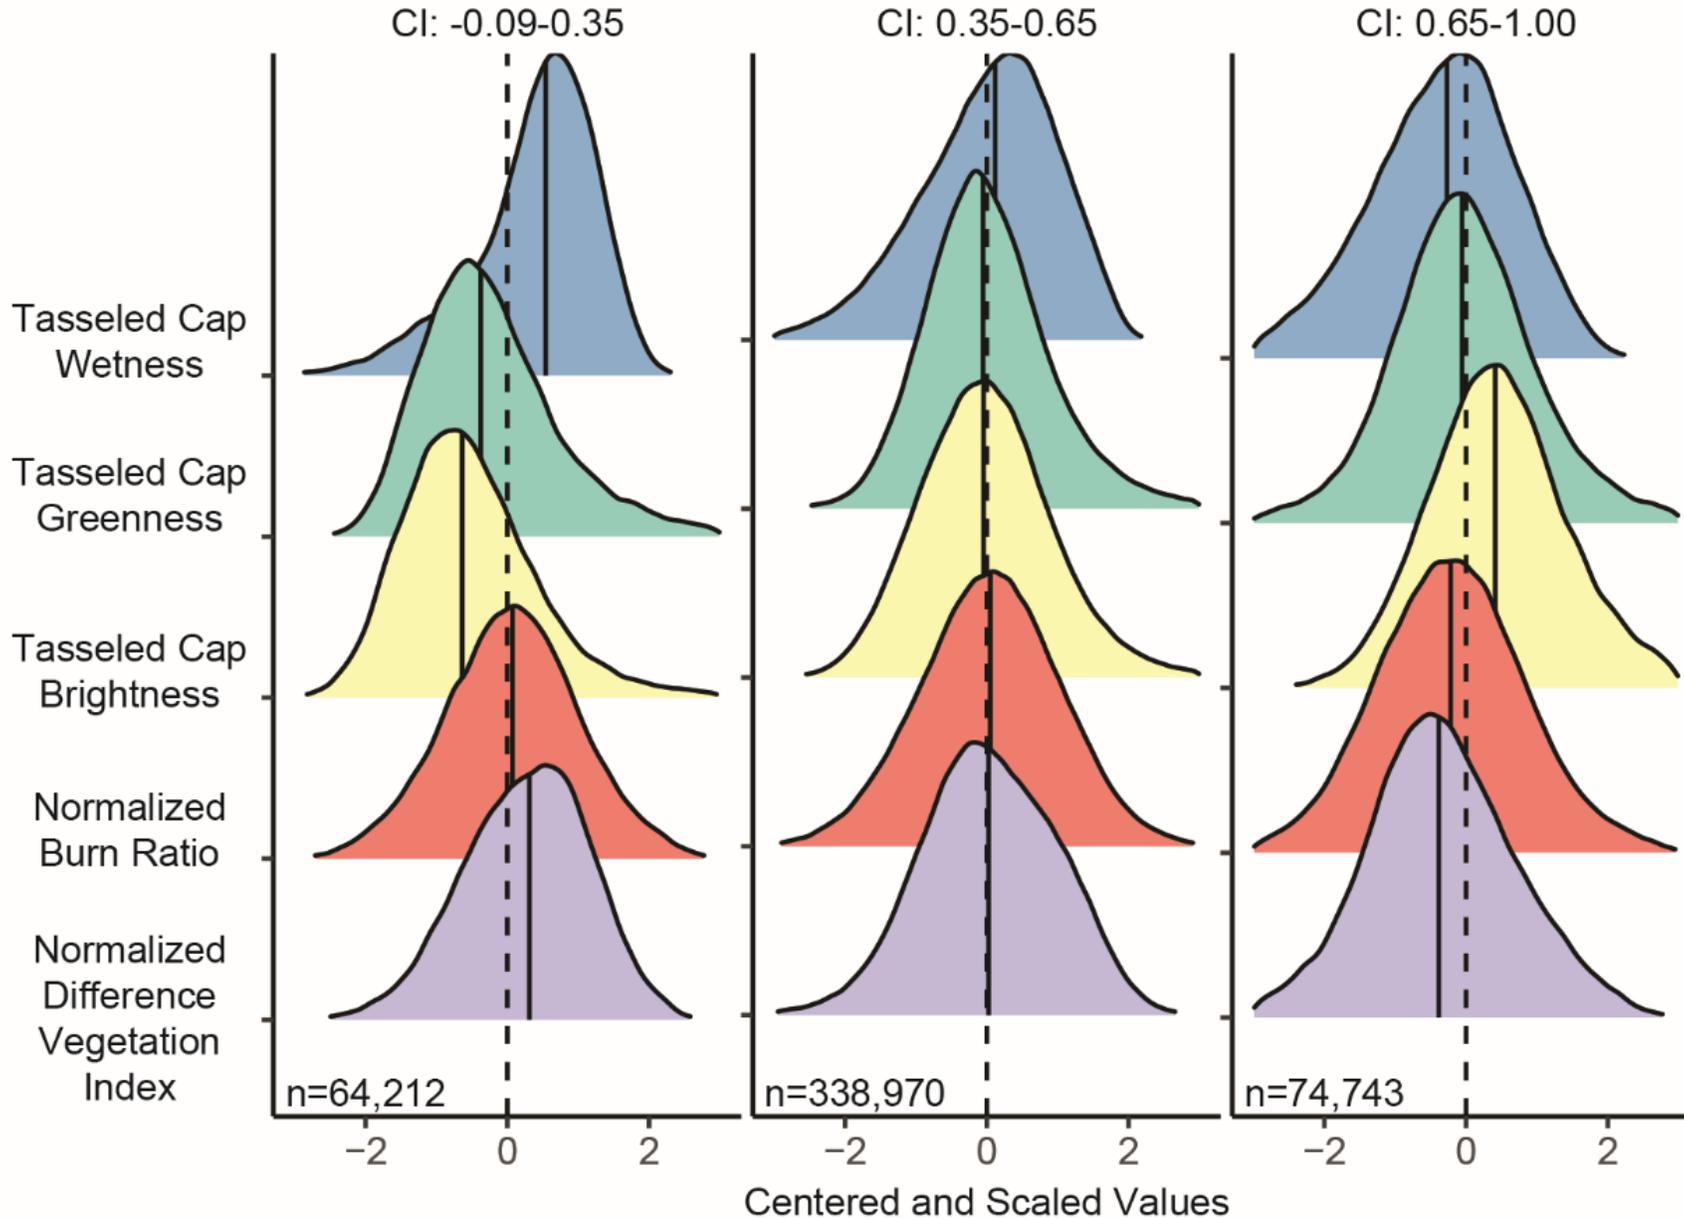

Moran et al. 2018

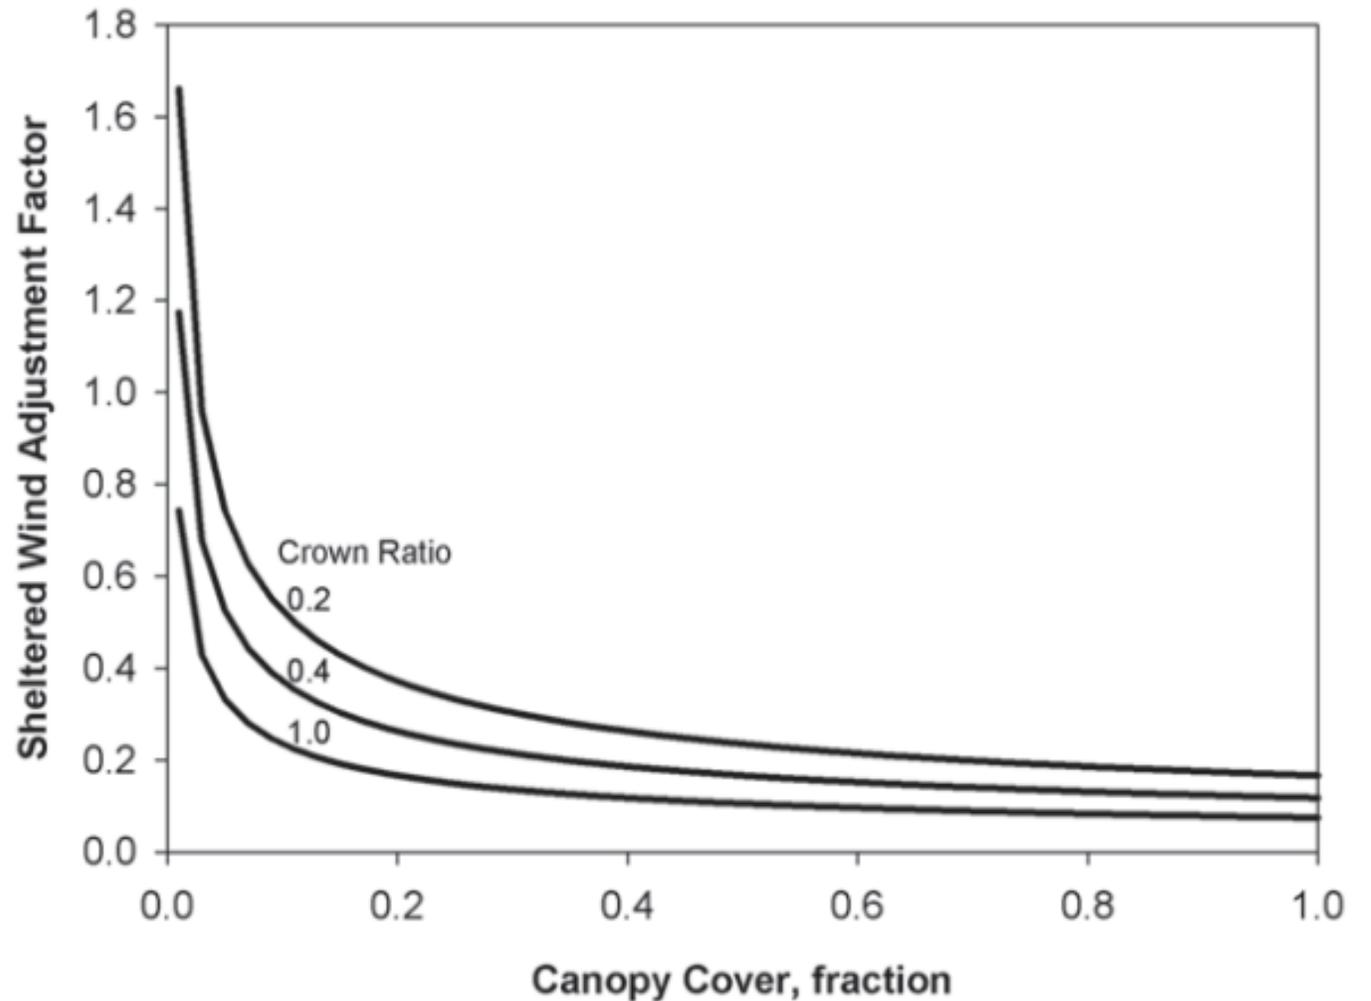

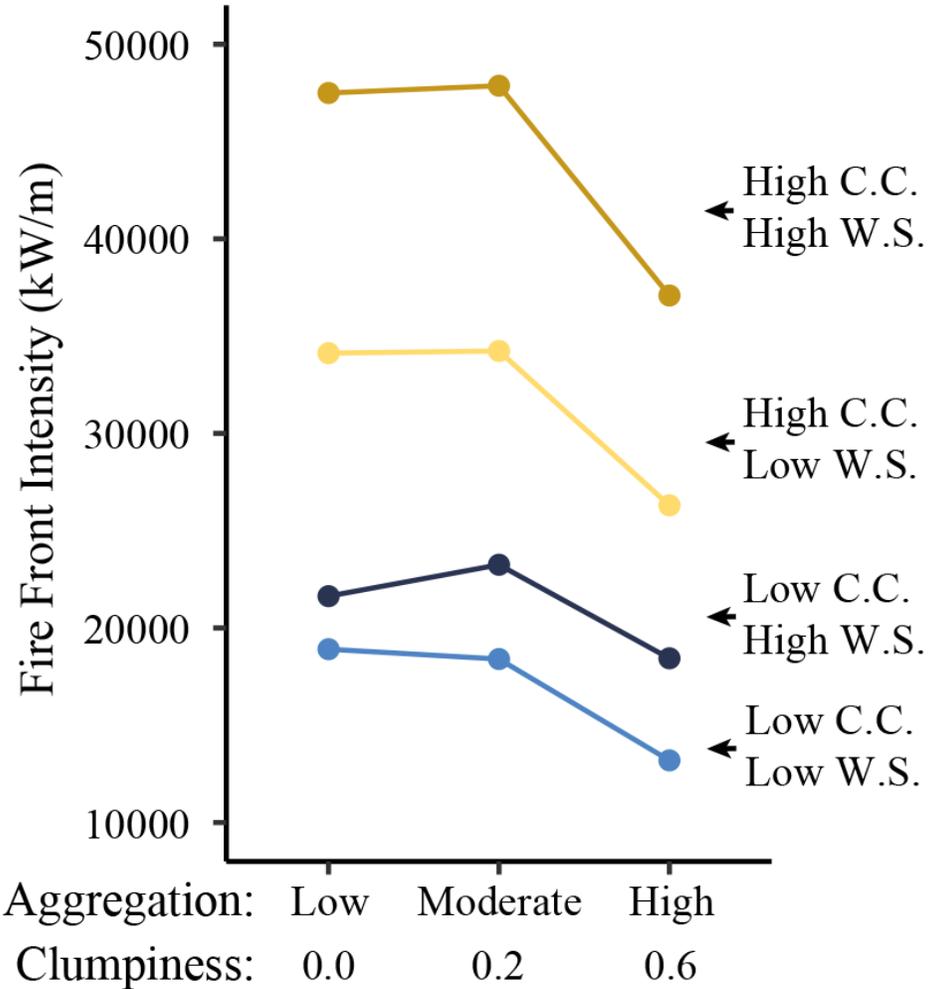

Parsons et al. 2017

Spectral Index Distributions by Clumpiness Index (CI)

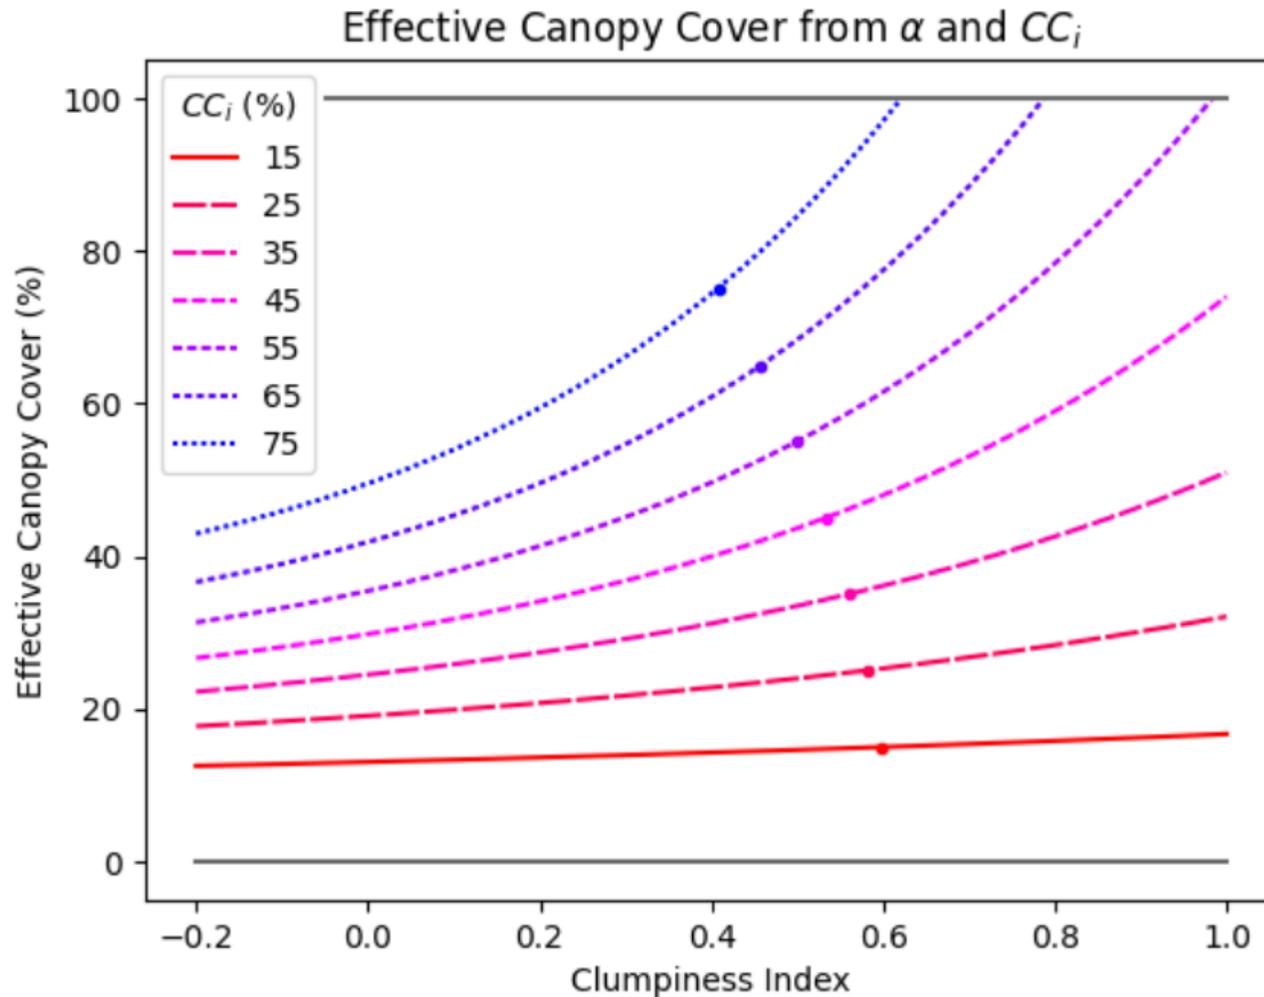

There is a Landsat spectral signal for the spatial arrangement of tree canopy

# Application in Current Operational Fire Models

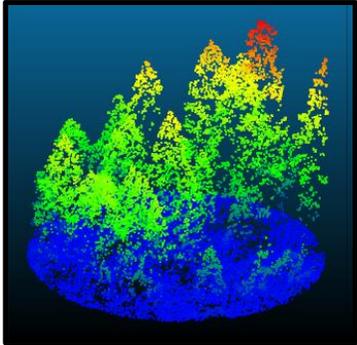

# Modify Canopy Cover (CC) to represent the expected change in intensity based on CC arrangement

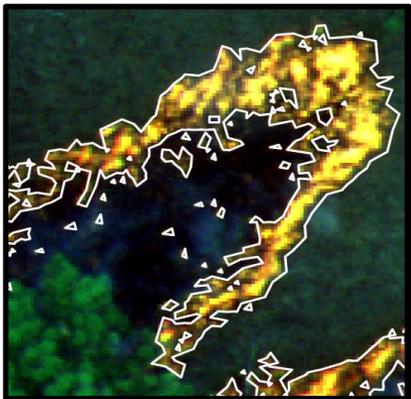

# Conceptual Framework

“...understand the causes and consequences of pattern” - Levin

3D Fuels and  
Forest Structure

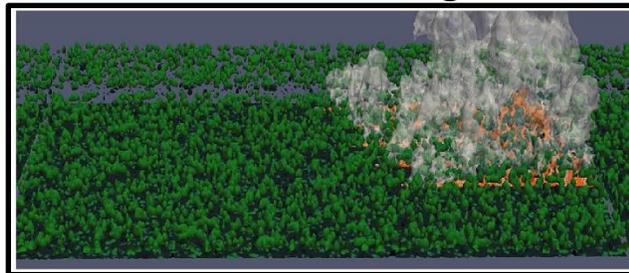

Fire Behavior

Prescribed Fire  
*Experiments*

Next Generation  
Fire Modeling

# “Standard” Fire Data Collection

---

## Pre-Fire

- 3D Point Clouds
  - SfM – RGB & Multi-spec
  - LiDAR
  - TLS
- Fuels Data
  - Photo Load
  - Clipped and Weighed
  - Moisture

## During-Fire

- Thermal
  - Flir 7-14 micron
- Multi-Spectral
  - Micasense Rededge
- Weather Station

## Post-Fire

- 3D Point Clouds
  - SfM – RGB & Multi-spec
  - LiDAR
  - TLS
- Fuels Data
  - Not much
  - Consumption on one burn

# “Standard” Fire Data Collection

---

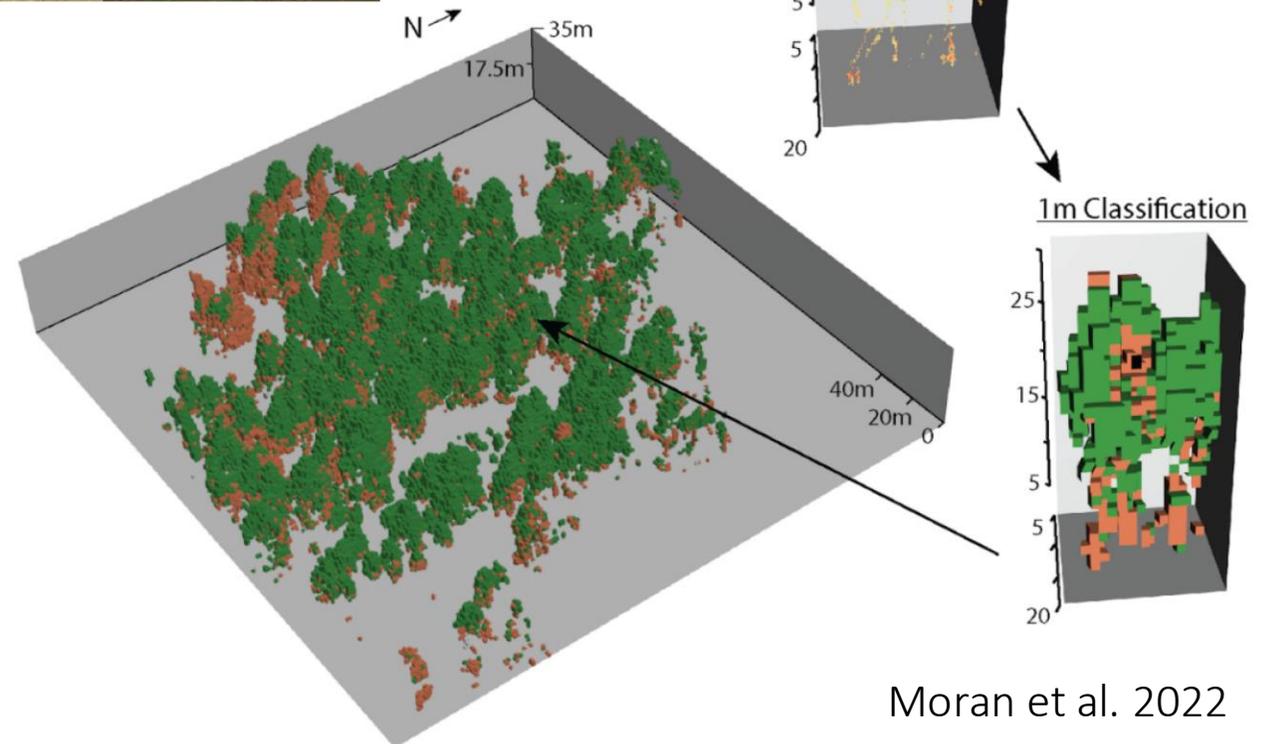

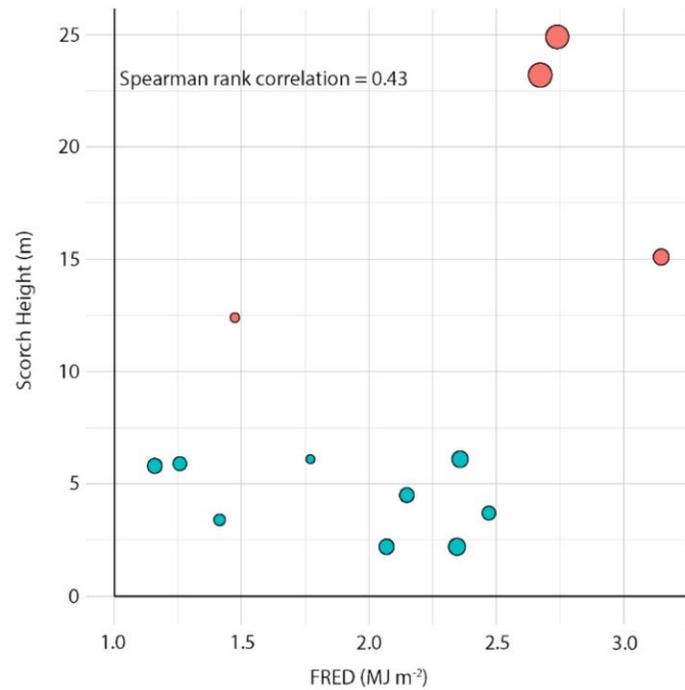

-55 Plots: most 1 ha in area, with some pre-, during-, and post-fire data

Minority have the "full-suite" - lots of tech

FastFuels UAS on-ramp research will translate to fuel inputs

Fine-scale weather much more difficult....

# Post-Fire

# Data Useful for Modeling

---

A note on Validation:

~~Pixel to Pixel or Progression Matching~~

Pattern-Process Interactions We Care About

# Prescribed Burn Experiments

## Crop Circles

## Chevrons

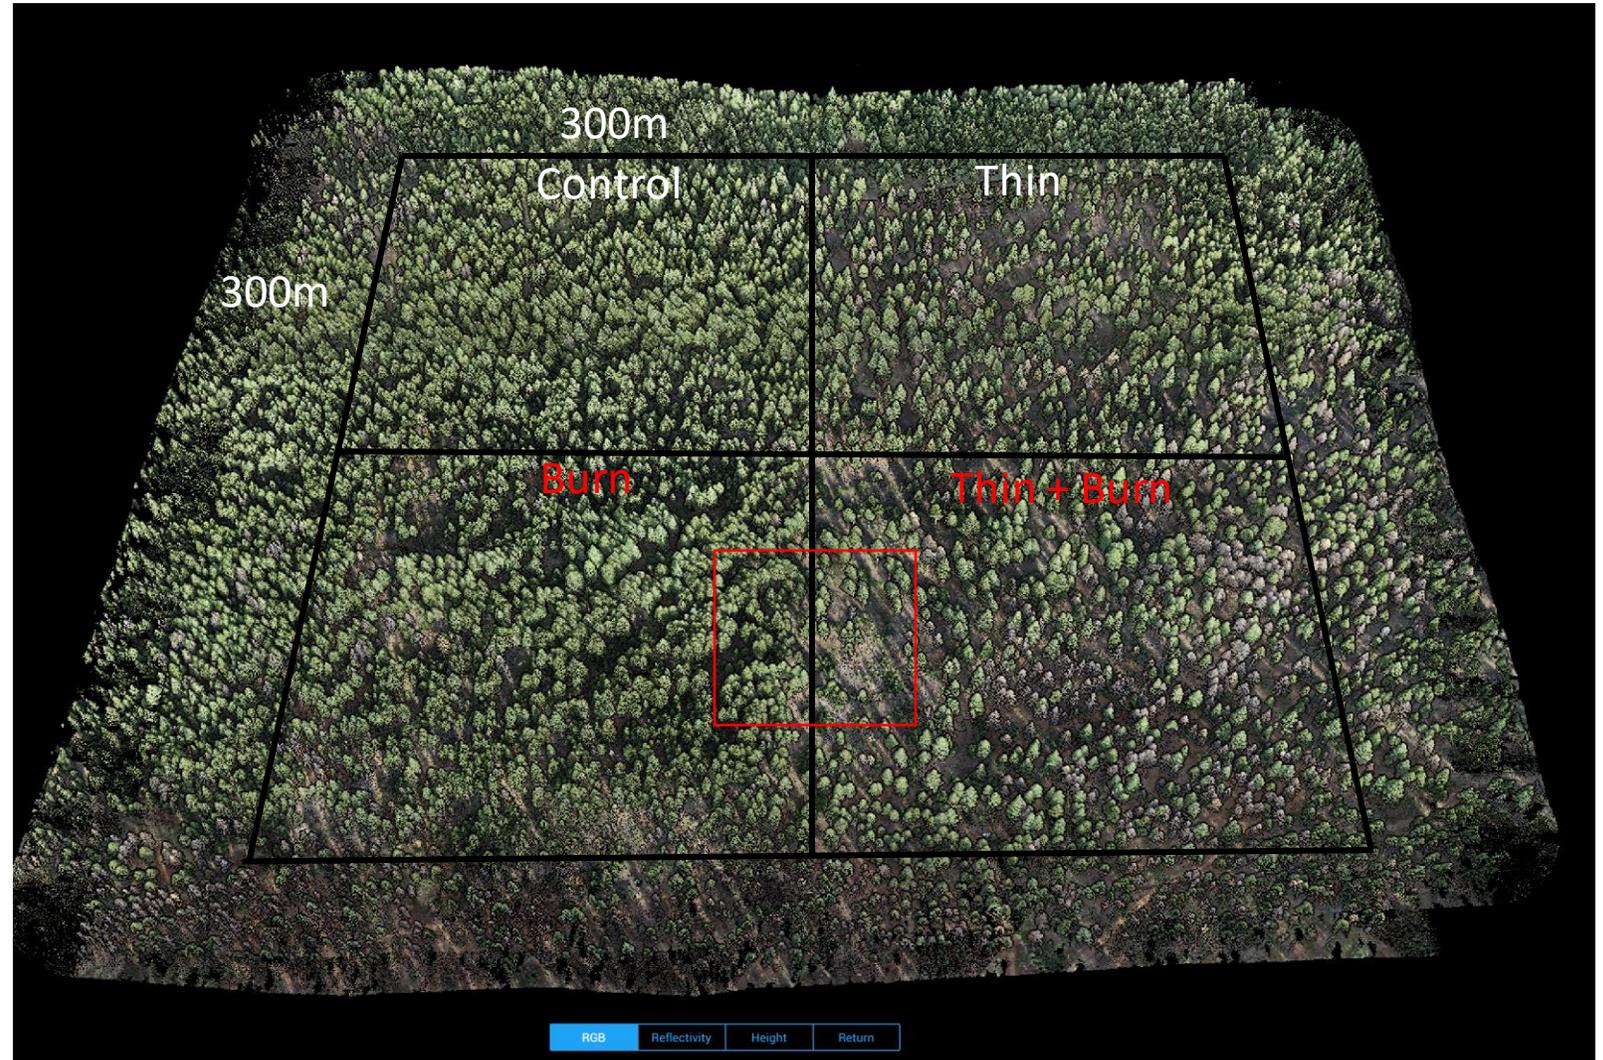

## Fire-Fire Surrogate

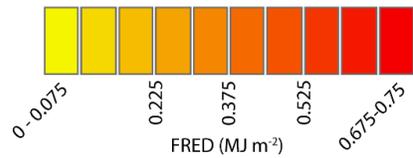

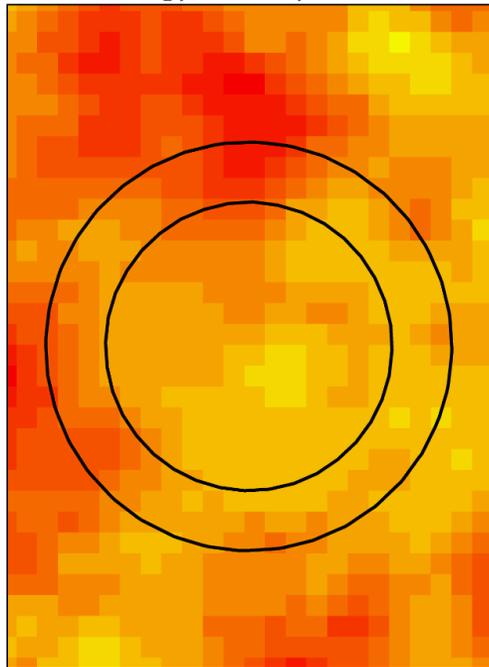

# Lubrecht Fire-Fire Surrogate

- Four treatment blocks, three replicates
  - Ongoing experiment originally conceived 20 years ago
  - Significant field data collected
  - Thinning Completed in 2023
  - Burns Completed Spring 2024

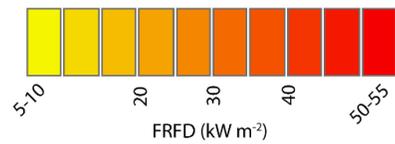

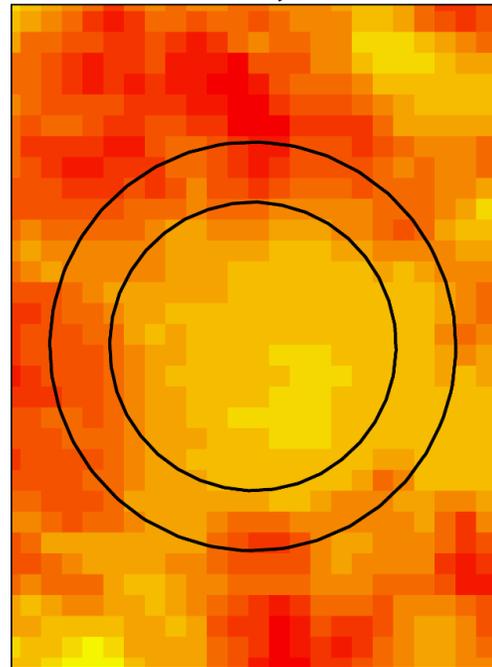

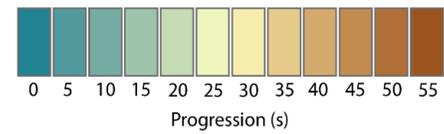

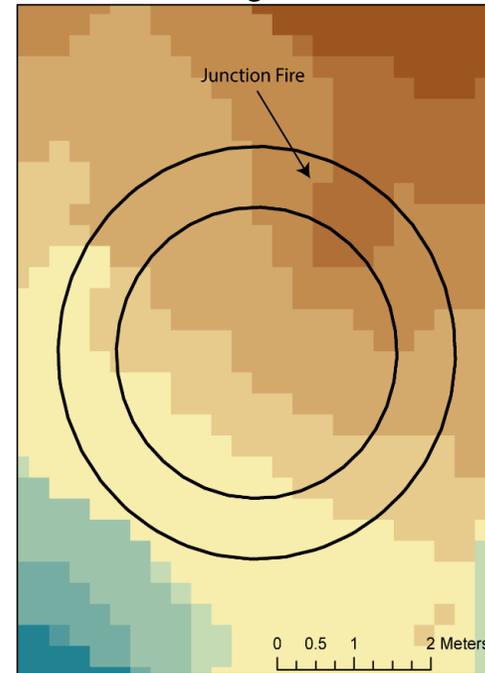

Fire Radiative  
Energy Density (FRED)

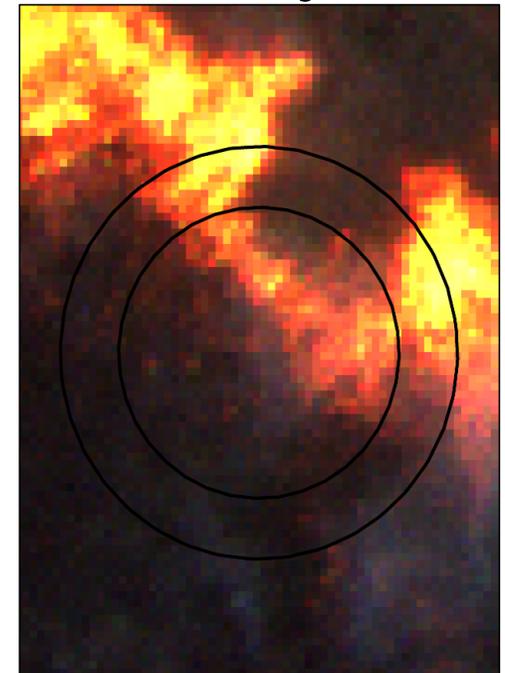

Maximum Fire Radiative  
Flux Density (FRFD)

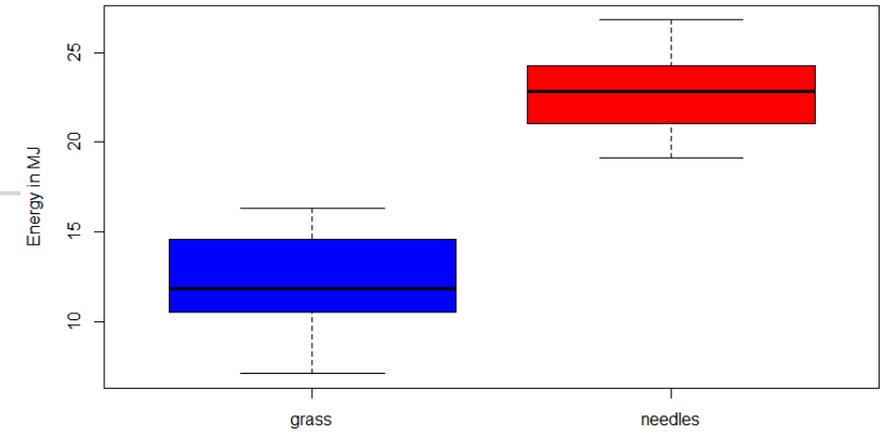

Fire Progression

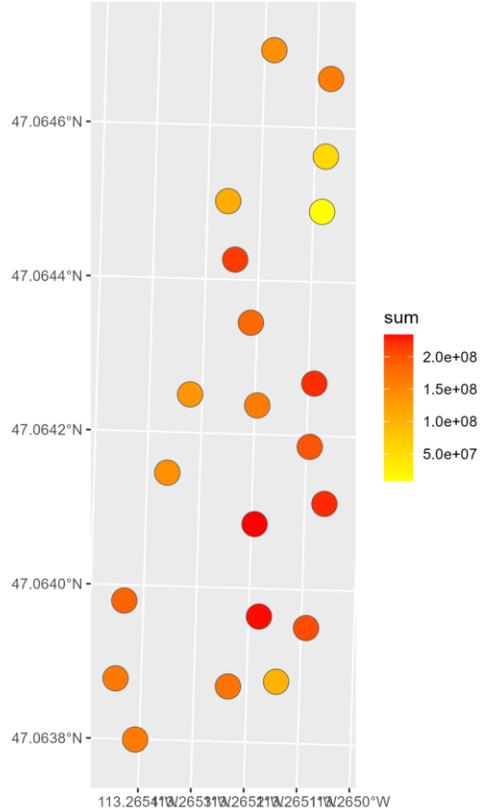

RGB Image

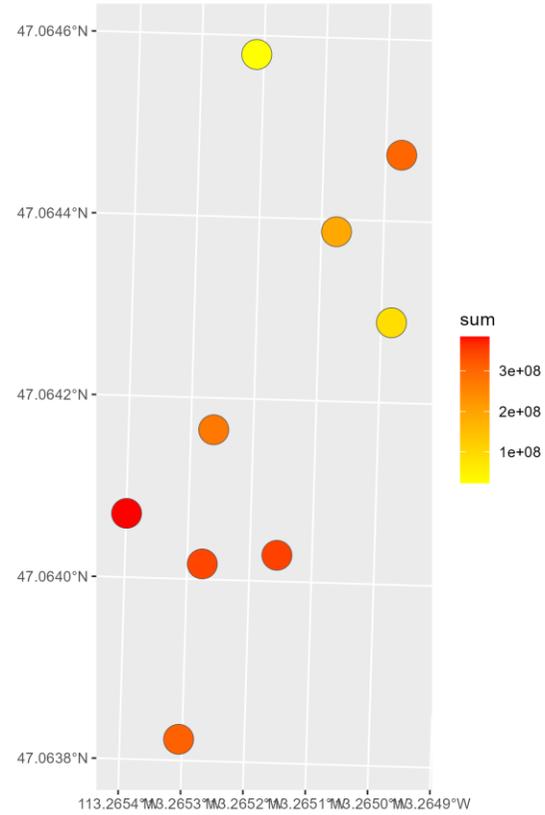

Measured Energy by Fuel Type

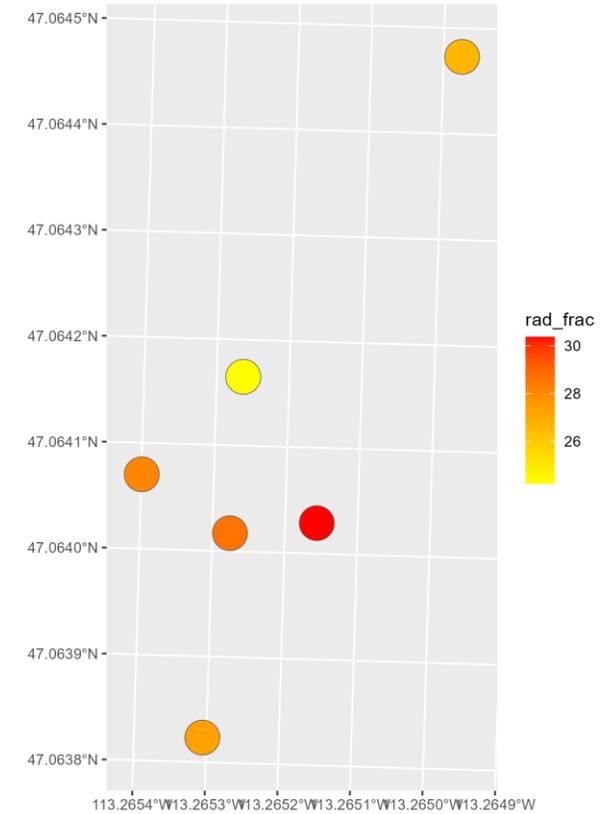

Total Energy for each Grass Circle (MJ/m<sup>2</sup>/pixel)

Total Energy for each Needle Circle (MJ/m<sup>2</sup>/pixel)

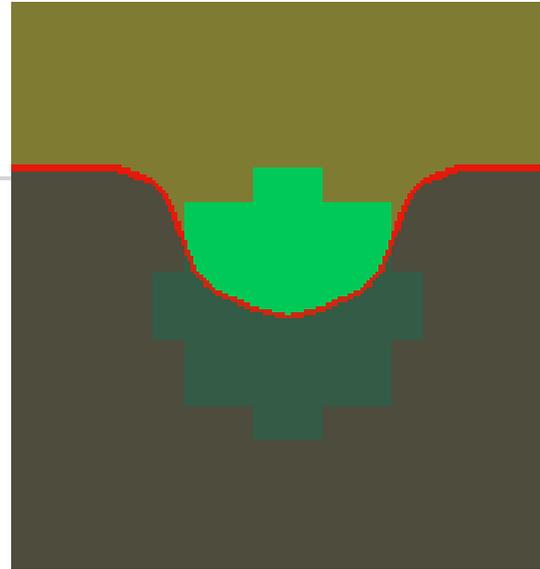

Radiant Fraction for each Needle Circle (as percent)

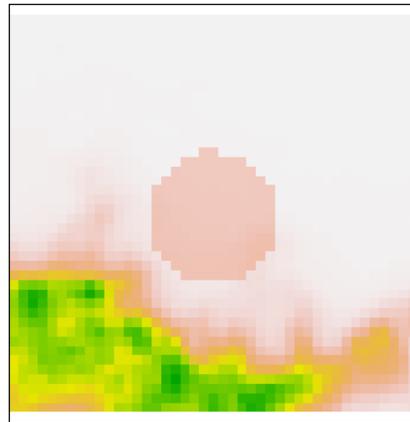

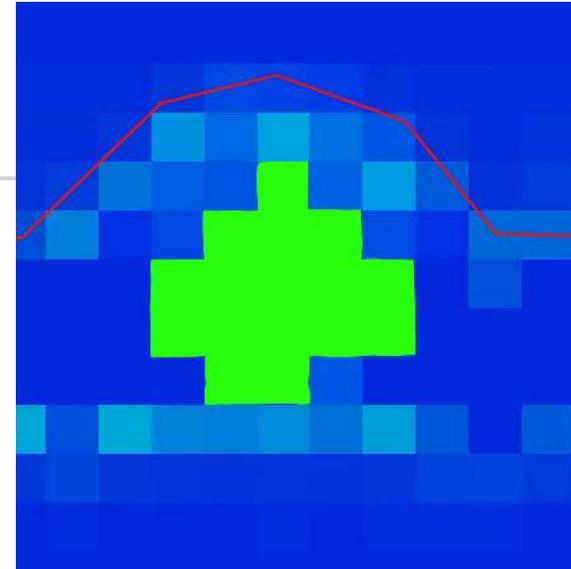

FDS Level Set 4

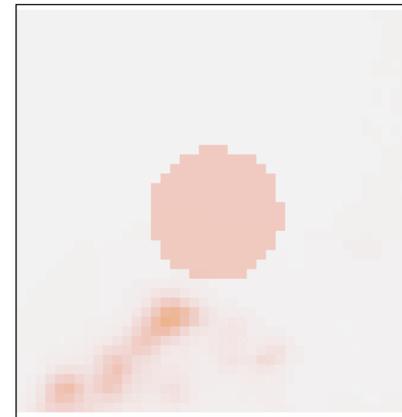

↕ Comparable Observation ↕

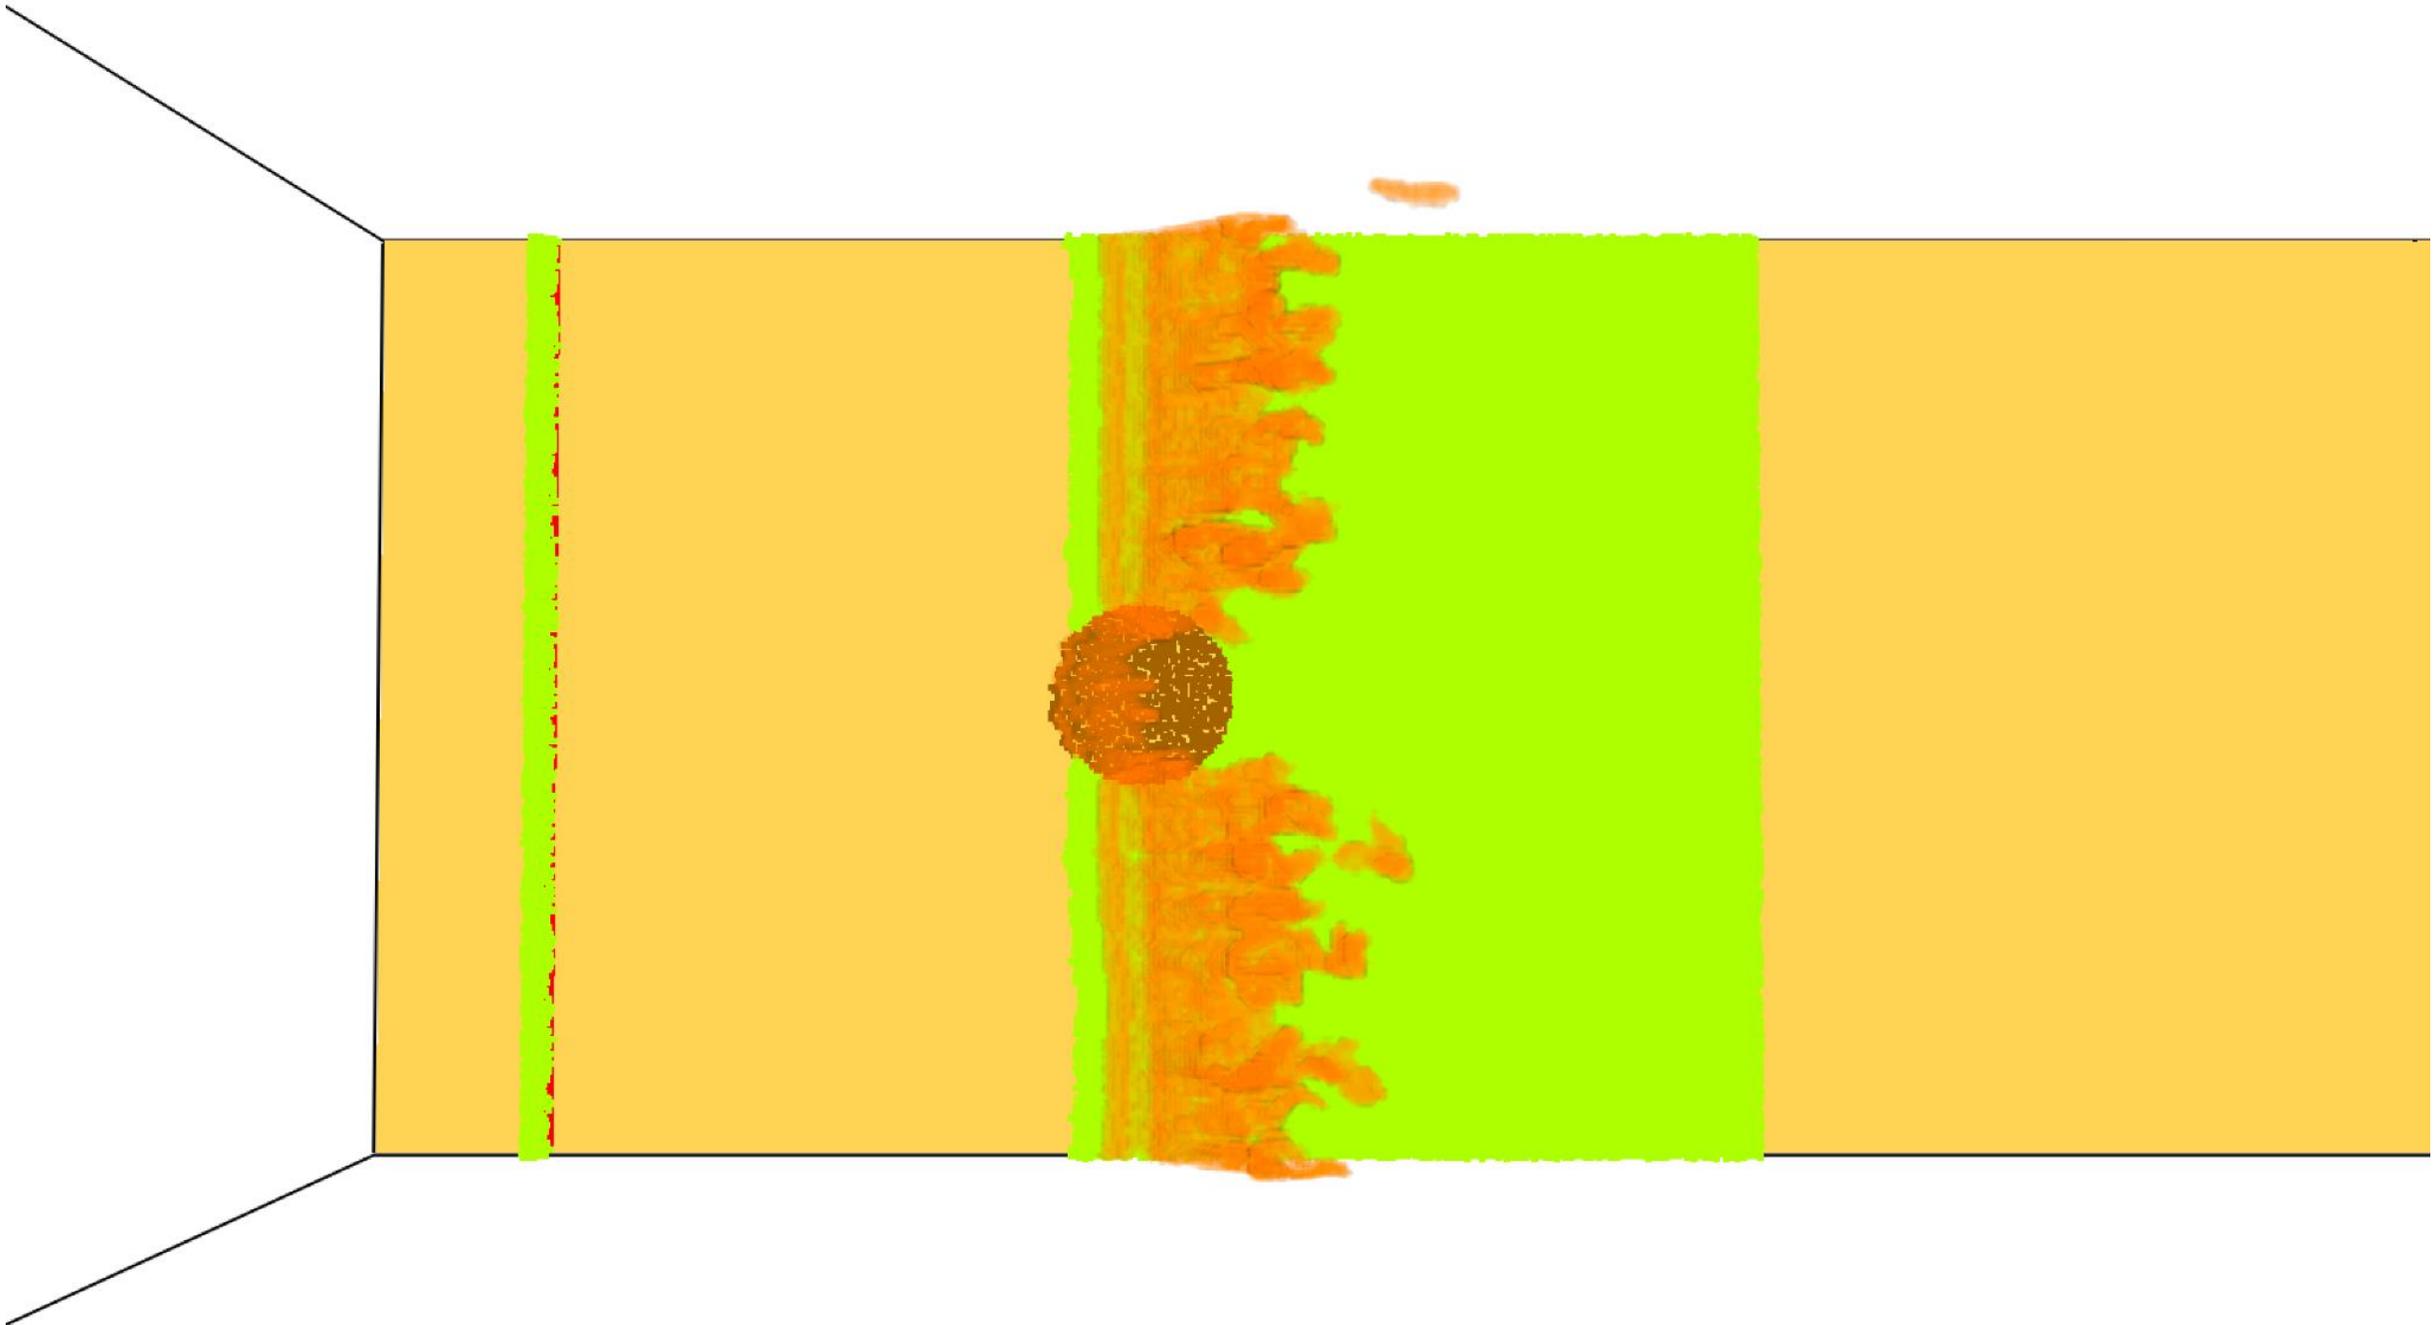

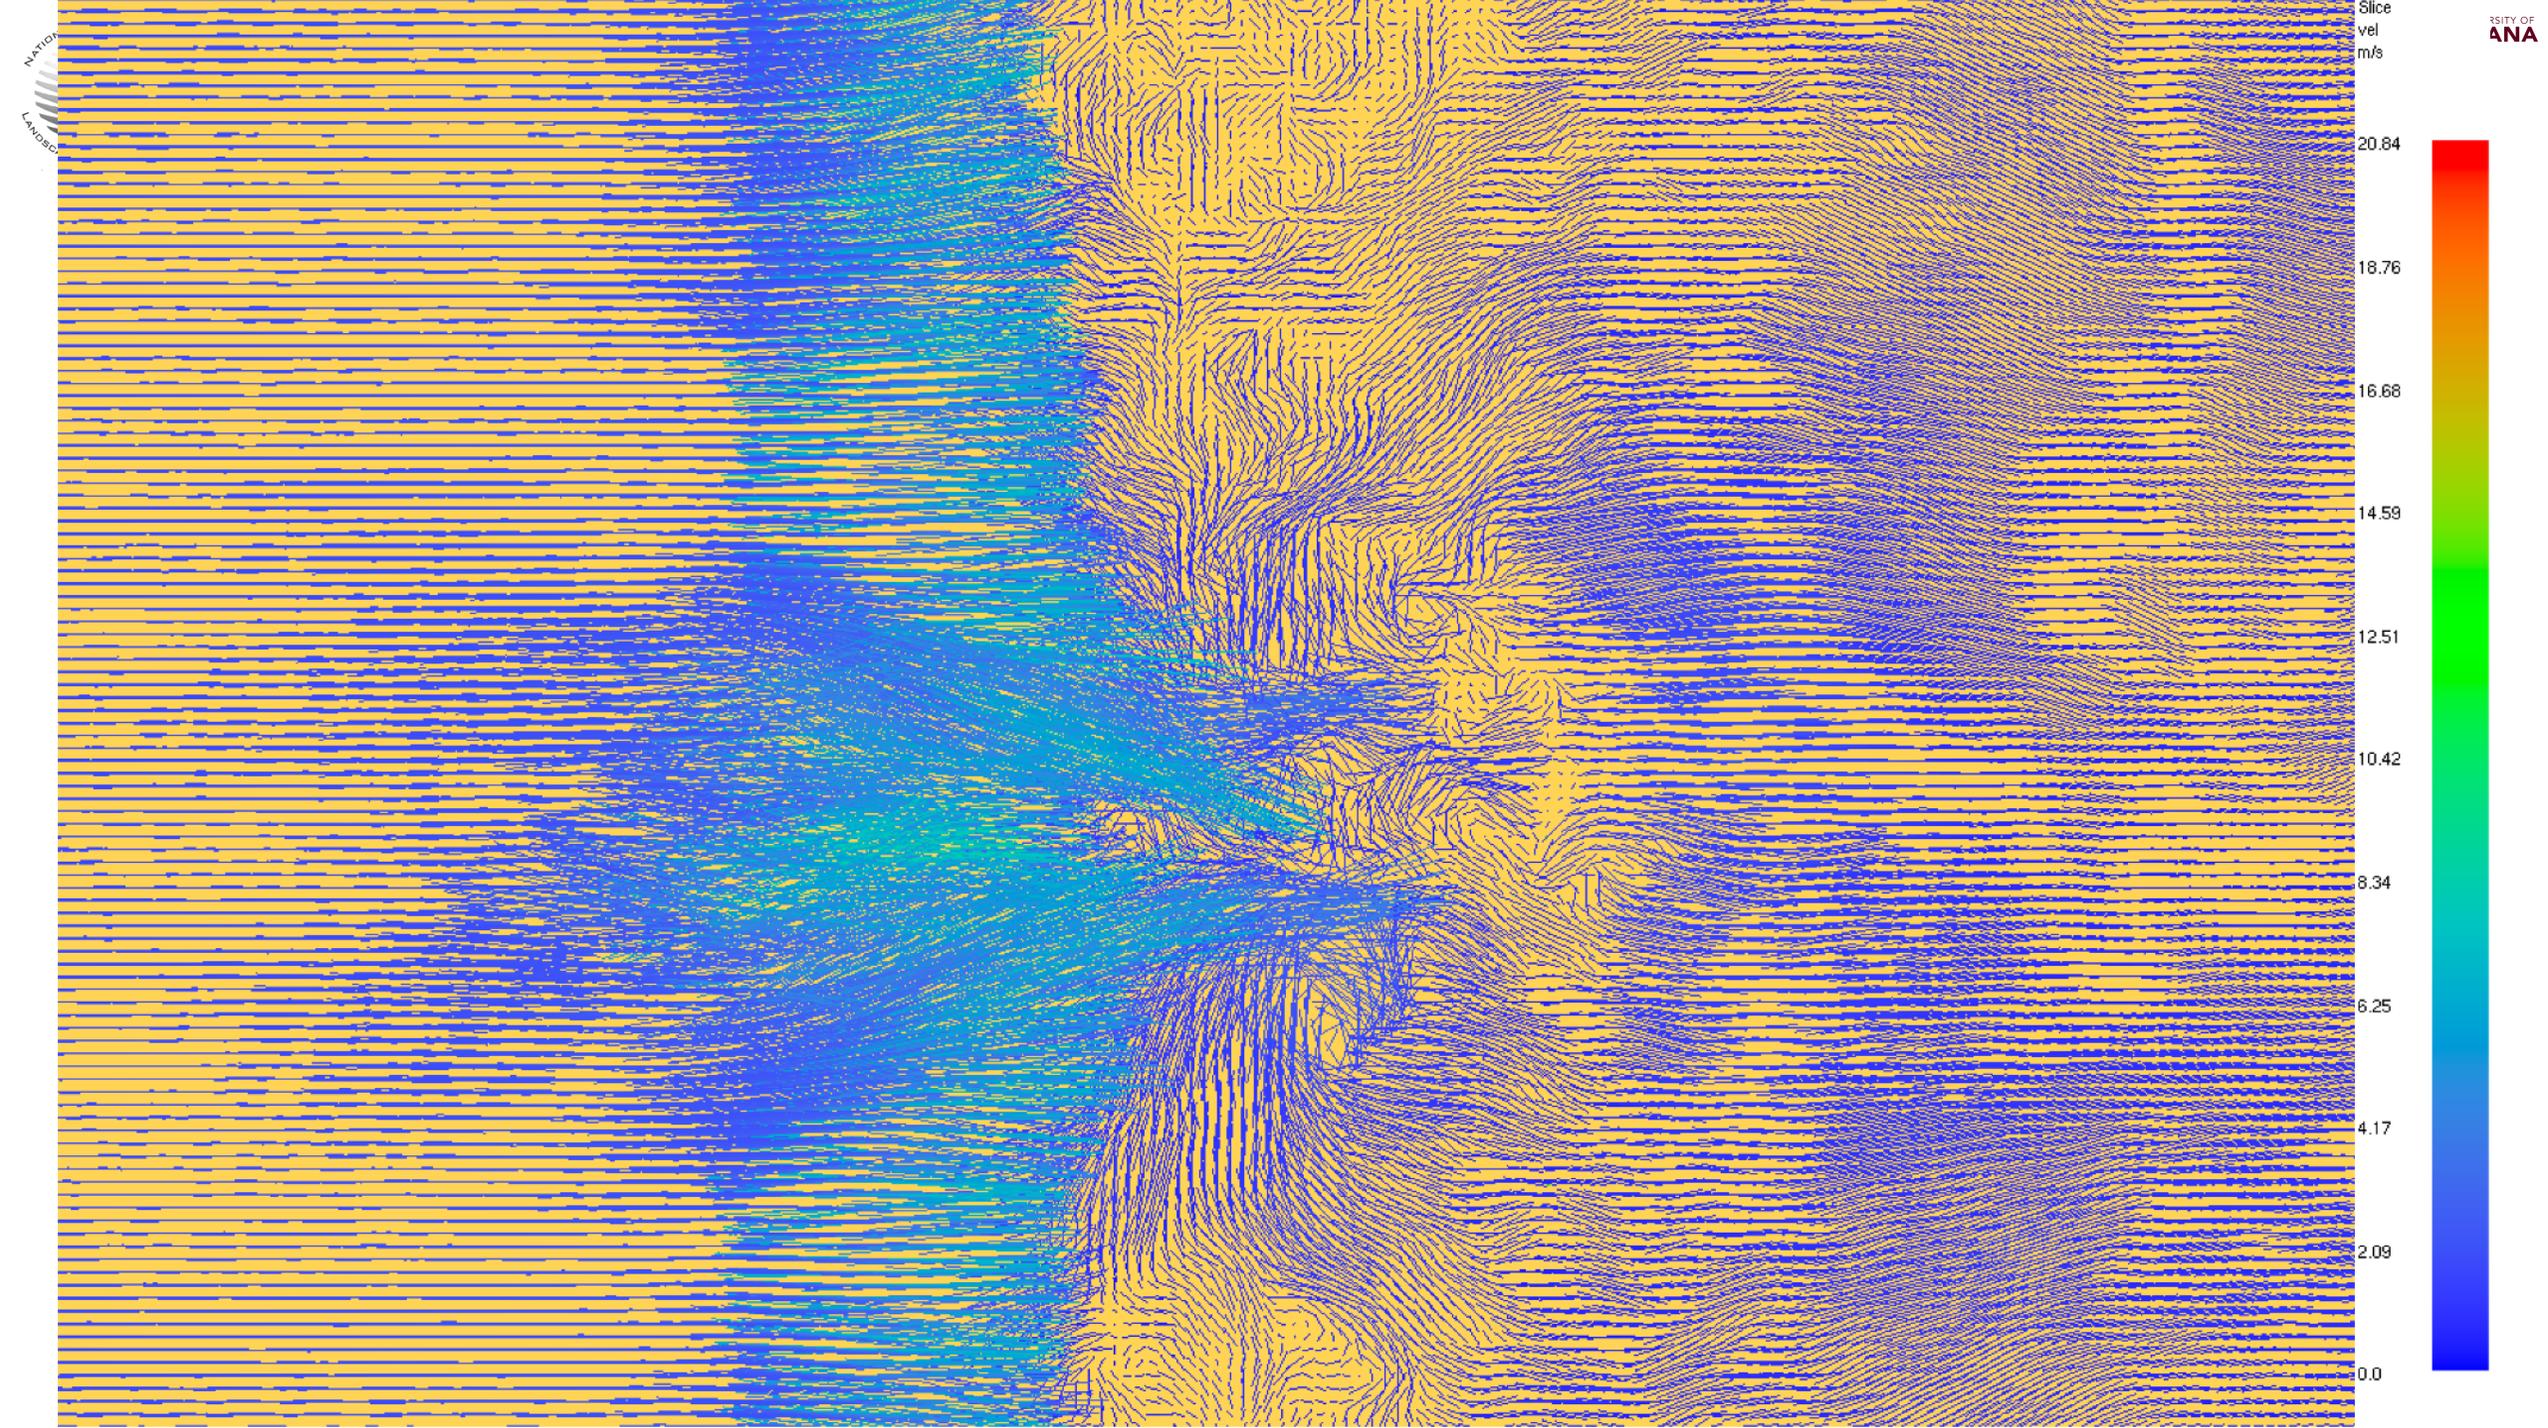

Full FDS

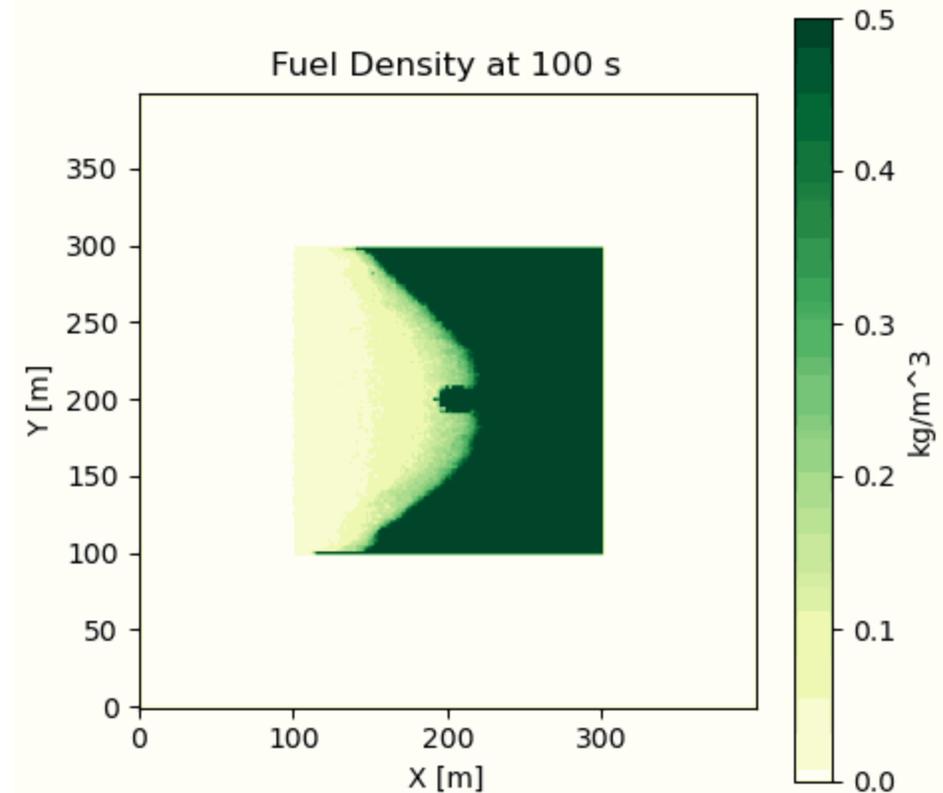

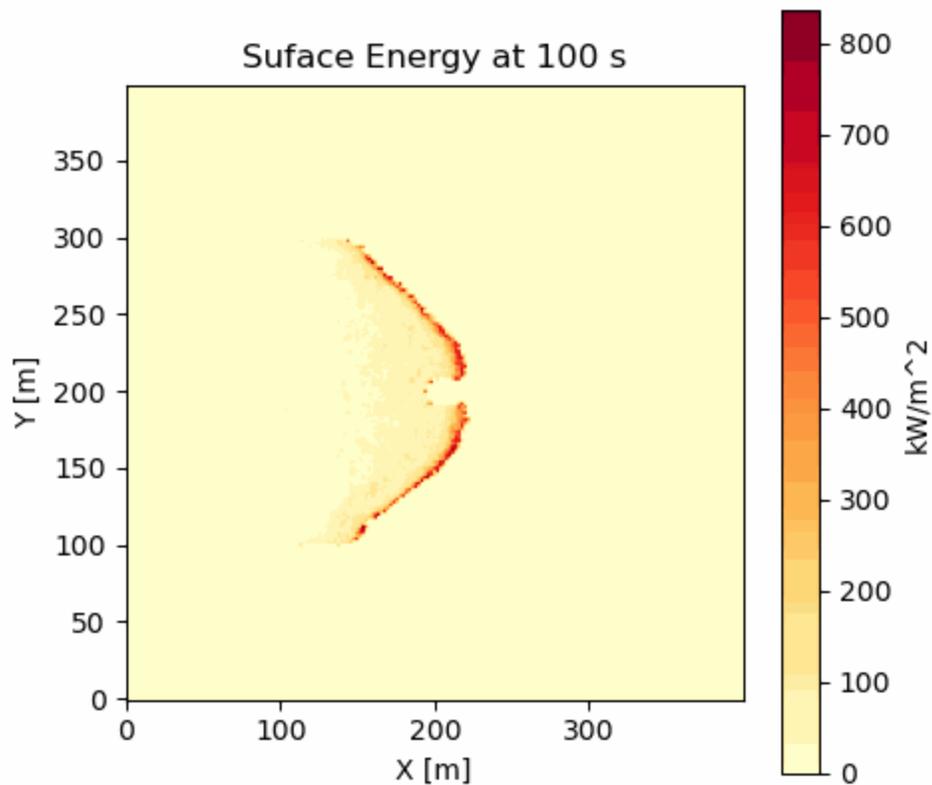

↕ Comparable Observation ↕

# Equivalent Quic-Fire Simulations

Self-Annealing Fire Behavior: Fireline Coherence

# Next Steps

---

Expand experiments in modeling space

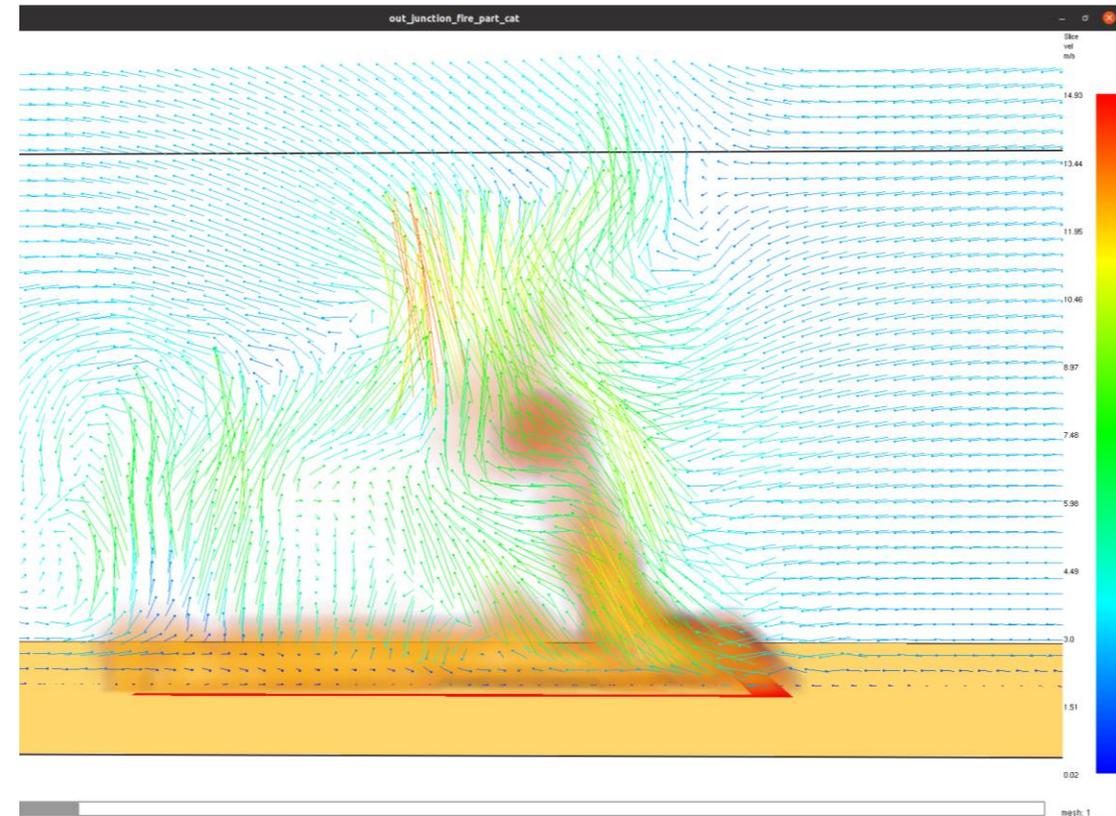

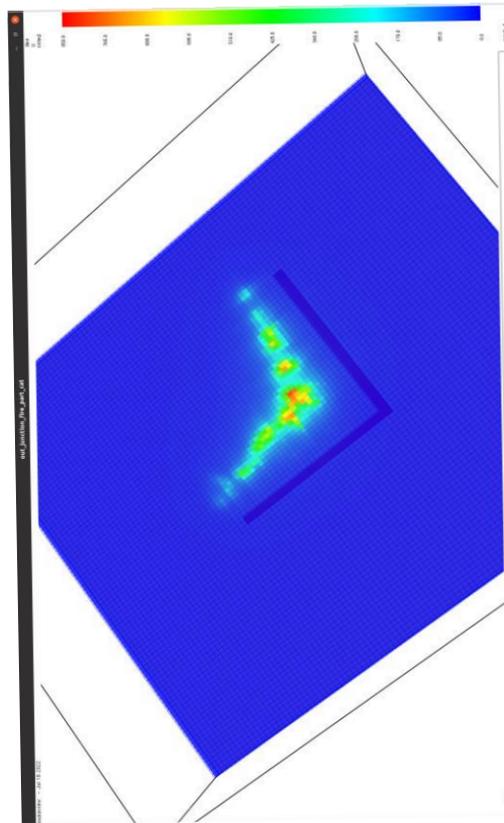

- Circle Size Thresholds
- Weather and Fuel Mass Impacts
- Spatial Arrangement

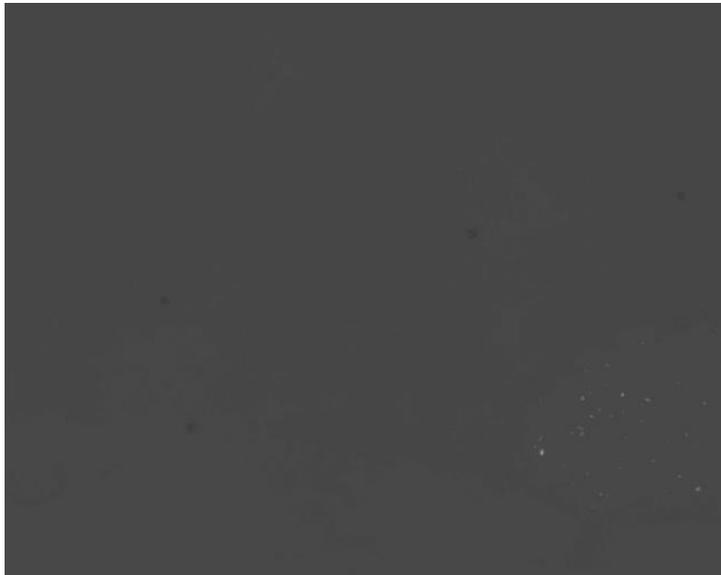

Example Application

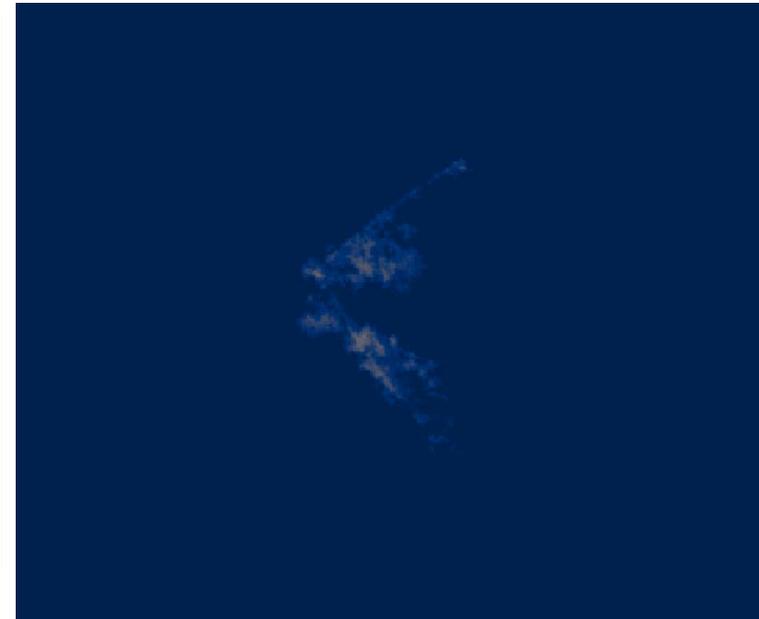

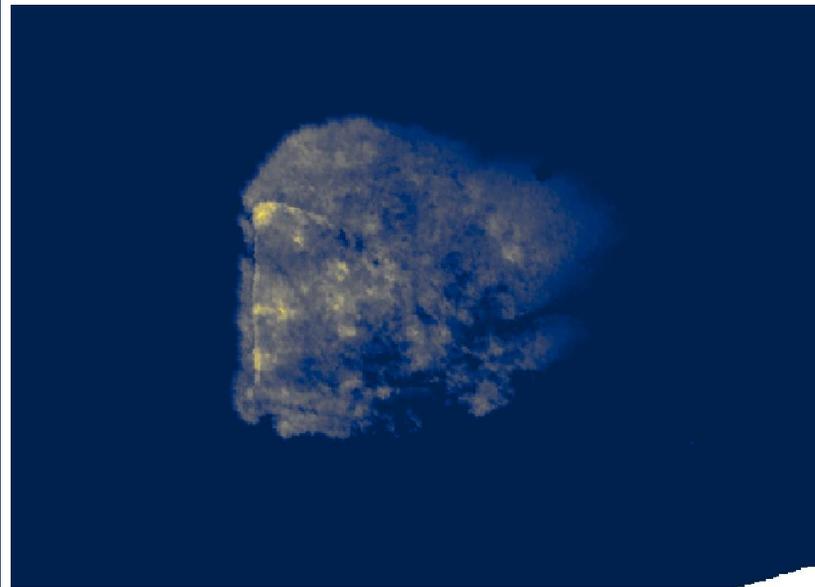

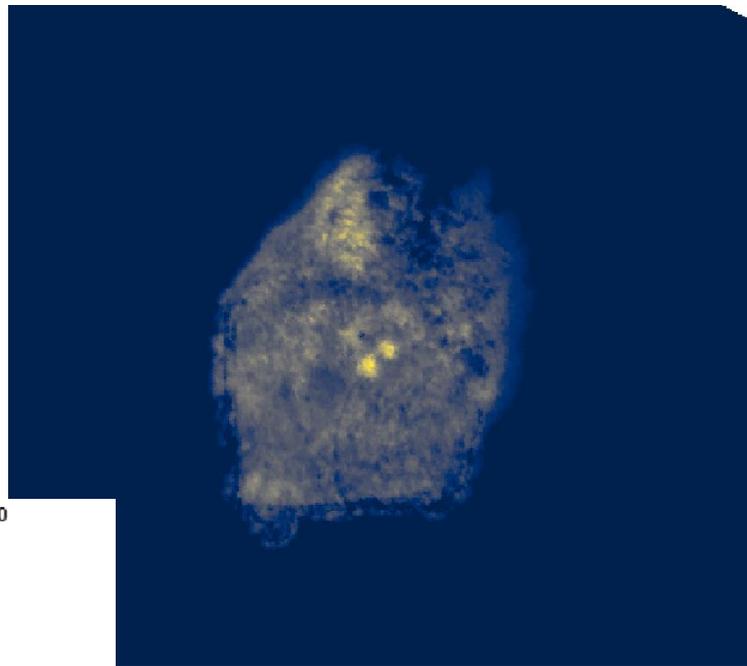

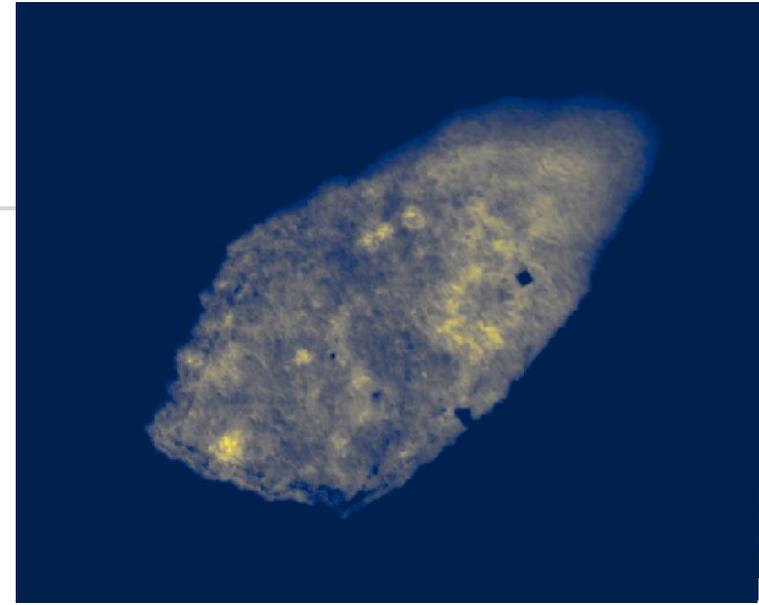

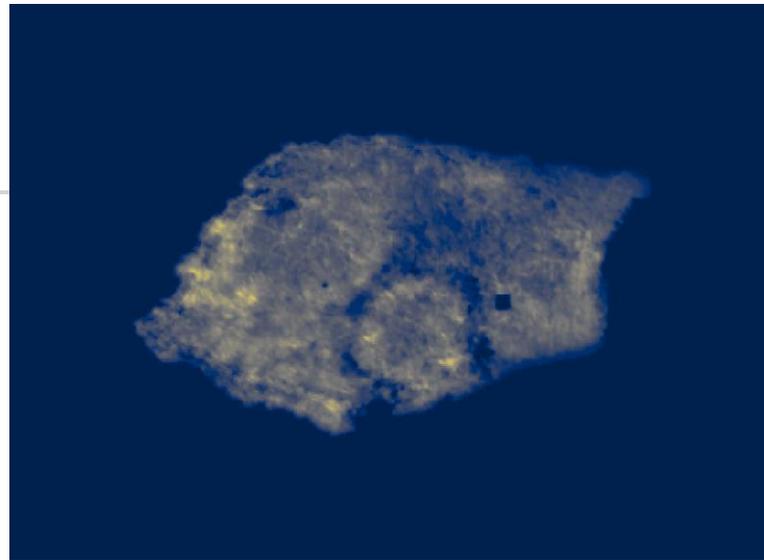

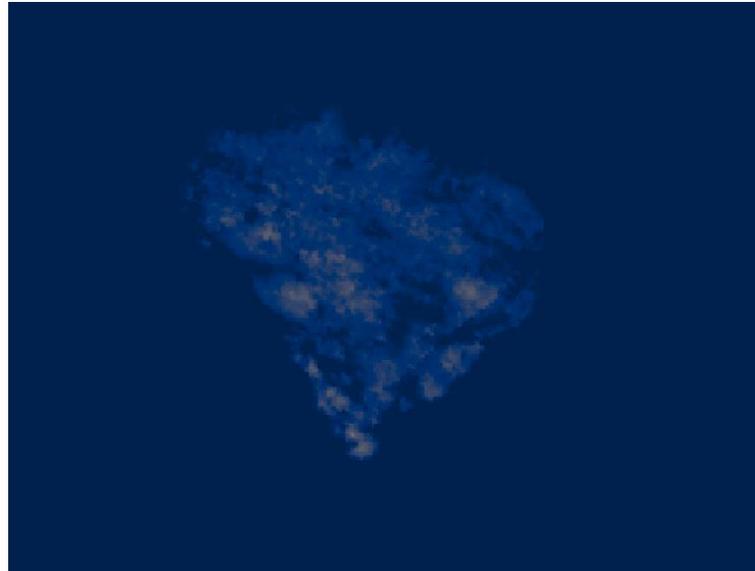

Precision Fuel Treatments

# Fire Dynamics – Interacting Firelines

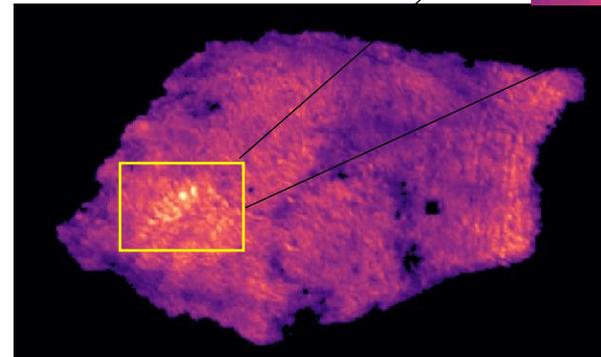

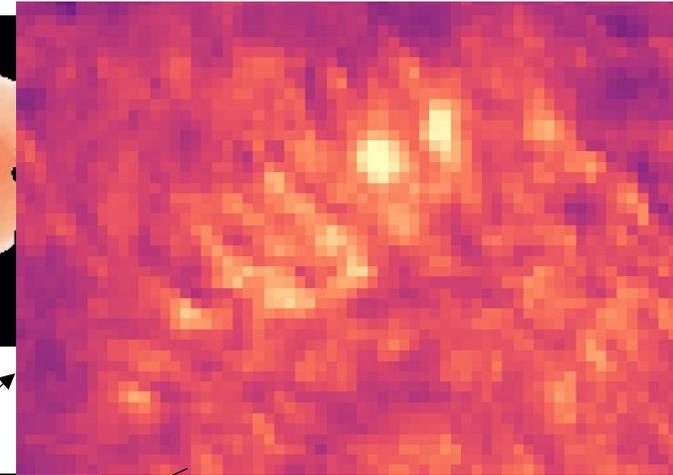

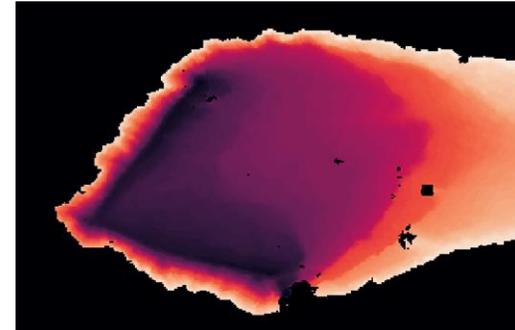

J/m<sup>2</sup>

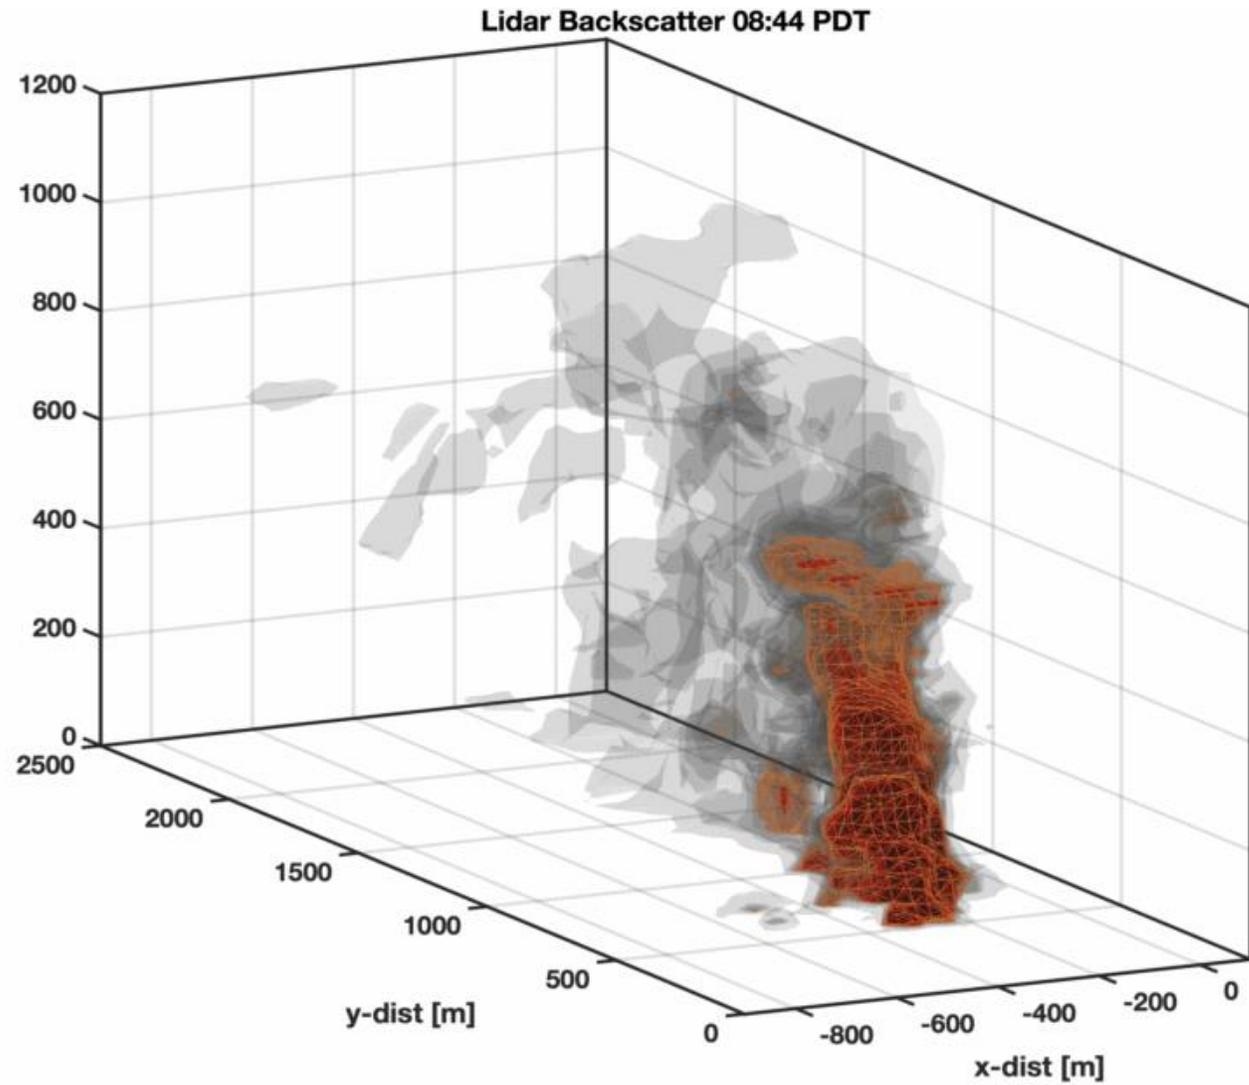

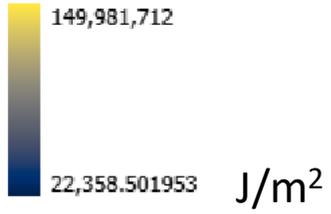

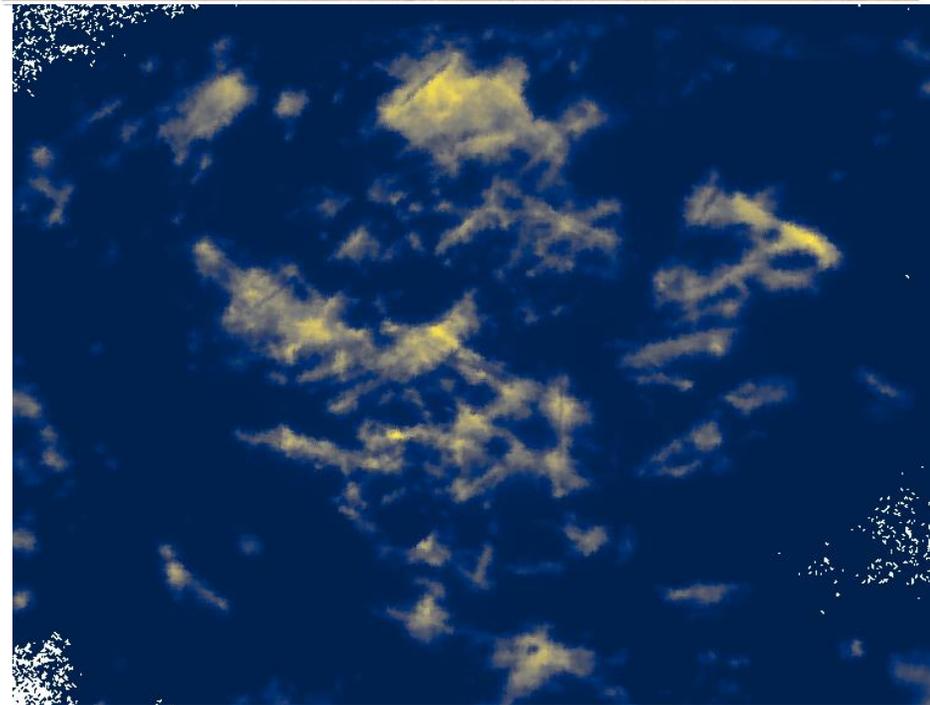

# Initial Results

1 of 6 chevrons showed strong interaction

Stronger intensity, consistent wind speed and wind direction alignment

Video: Tyler Salas, UNR grad student

# Next Steps

---

Identify conditions that reliably produce  
Increased fire behavior with variable  
Ignition geometry

- Through volume, many chevrons in  
A single burn
- Weather and Fuel Mass Impacts
- Spatial Arrangement

## Example Application

Mixed Severity Prescribed Burning
